

RICARDO: ECONOMIC RENT and OPPORTUNITY COST

David Ricardo (1772-1823): one of the founders of the Classical School of Economics

1. David Ricardo's Concept of Economic Rent:¹ Definition:

Economic rent on land is the value of the *difference in productivity* between a given piece of land and the poorest [and/or most distant], most costly piece of land producing the same goods (e.g. bushels of wheat) under the same conditions (of labour, capital, technology, etc.).

Productivity is defined here in terms of both:

- (a) the natural fertility of the soil; and the productivity of the existing technology in utilizing currently available labour and capital;
- (b) and also the relative distance from the same market:
 - (i) we are discussing this in terms of regional economics with one market.
 - (ii) This part of theorem, on the 'distance from the market', did not originate with Ricardo, but rather with a German economist: Johann Heinrich von Thünen (1783-1850), who noted , some years after the publication of Ricardo's *Principles*, that the closer a piece of land was to the urban core the higher was its market rent (reflecting economic rent).²
 - (iii) You can readily appreciate the significance of this by noting that Toronto rents in the heart of the financial district on Bay or University are higher than those in, say, Orangeville or Bolton to the north of Toronto.
- (c) Thus productivity differences reflect the cost differences in supplying grain to that one market from that piece of land.

This concept of economic rent involves the following six suppositions:

(1) in the initial stage of development, our starting point, with a stable and low level of population, only the very best lands are under cultivation: lands that are the most fertile, the most easily worked, and the closest to the market -- the lowest cost lands for producing grain.

(2) with population growth, the eventual diminishing returns on existing cultivated lands force into

and exchange This is followed by chapters on trade and the theory of economic welfare In the final chapter it is shown that much of the material in the earlier chapters can be combined by agricultural economists into a system for analysing and comparing the effects of alternative agricultural policies The ability of agricultural economics to provide a consistent framework for the analysis of policy problems thus enables it to make a key contribution to rural development
