Examining the Environmental Impacts of Materials and Buildings Brownell, Blaine Erickson, 2020-02-28 Fundamental environmental challenges such as climate change resource depletion and pollution are still widely relevant in today's world. Many of these problems have been associated with the architecture engineering and construction industries due to the level of resources used in these professions. In recent years many manufacturers in these fields have expressed the motivation to make necessary changes that would be beneficial to the environment. Despite this progress there remains a lack of research and assessment on the methods to achieve environmental stability within these architectural fields. Examining the Environmental Impacts of Materials and Buildings provides emerging research exploring the theoretical and practical aspects of ecological performance within modern building design and materials based construction. Featuring coverage on a broad range of topics such as life cycle assessment material flows analysis and sustainability this book is ideally designed for architects civil engineers construction professionals environmentalists ecologists business practitioners scientists policymakers designers researchers and academicians seeking research on current trends in environmental performance within building design. **Design of Urban Stormwater Controls, MOP 23** Water Environment Federation, American Society of Civil Engineers/ Environmental & Water Resources Institute, 2012-05-07 Innovative Techniques for Designing Urban Stormwater Controls Fully updated to address the paradigm shift in the way stormwater is viewed and managed Design of Urban Stormwater Controls focuses on consolidating technologies to foster a convergence between traditional stormwater controls and green infrastructure.
