Keyes,2012-11-08 This book provides a new

generation of research in which scholars are investigating mental health and human development as not merely the absence of illness or dysfunction but also the presence of subjective well being Subjective well being is a fundamental facet of the quality of life The quality of an individual s life can be assessed externally and objectively or internally and subjectively From an objective standpoint other people measure and judge another s life according to criteria such as wealth or income educational attainment occupational prestige and health status or longevity Nations communities or individuals who are wealthier have more education and live longer are considered to have higher quality of life or personal well being The subjective standpoint emerged during the 1950s as an important alternative to the objective approach to measuring individual s well being Subjectively individuals evaluate their own lives as evaluations made in theory after reviewing summing and weighing the substance of their lives in social context Research has clearly shown that measures of subjective well being which are conceptualized as indicators of mental health or mental well being are factorially distinct from but correlated with measures of symptoms of common mental disorders such as depression Despite countless proclamations that health is not merely the absence of illness there had been little or no empirical research to verify this assumption Research now supports the hypothesis that health is not merely the absence of illness it is also the presence of higher levels of subjective well being In turn there is growing recognition of the personal and social utility of subjective well being both higher levels of hedonic and eudaimonic wellbeing Increased subjective well being has been linked with higher personal and social goods higher business profits more worker productivity greater employee retention increased protection against mortality increased protection against the onset and increase of physical disability with aging improved cognitive and immune system functioning and increased levels of social capital such as civic responsibility generativity community
