Development Essentials Richard Johnson,2025-06-13 ABAP Development Essentials ABAP Development Essentials is a comprehensive guidebook designed for today s enterprise ABAP developer architect or technical lead Spanning foundational architecture through to next generation modernization this reference masterfully navigates the full spectrum of ABAP development in SAP environments Readers begin with an in depth exploration of the ABAP platform s architecture security frameworks and continuous integration strategies laying a solid groundwork for understanding the ecosystem s complexities and critical delivery pipelines As the chapters progress the book delves into modern and advanced ABAP language constructs covering everything from procedural and object oriented paradigms to dynamic programming performance aware techniques and innovative database integration options such as Core Data Services and ABAP Managed Database Procedures It provides practical guidance for building high quality scalable applications on classic and modern user interface technologies from SAP

GUI and Web Dynpro to Fiori Elements and the ABAP RESTful Application Programming Model Seamlessly integrating real world best practices it equips readers to interface with SAP and non SAP systems using RFC OData event driven architectures and cloud based services The journey continues through robust strategies for testing security and compliance ensuring not only reliable performance but also regulatory adherence and data protection in mission critical environments Final chapters offer forward looking insights on legacy system modernization cloud readiness and the integration of artificial intelligence into ABAP landscapes With expert advice on architectural patterns DevOps open source collaboration and continuous delivery ABAP Development Essentials stands as an authoritative reference for professionals seeking to master enterprise grade ABAP development for today and tomorrow

Specification Mining on the User Interface Level

Fabian Richter, 2020-10-20 Master's Thesis from the year 2012 in the subject Computer Science Software grade 1.0

Technical University of Darmstadt Secure Software Engineering Group language English abstract In this thesis we propose another approach targeted at web applications that use Ajax HTML5 and other modern web technologies to achieve a look and feel that is only known by desktop applications These web applications are also referred to as Rich Internet Application RIA The user interface is a part of an application the same way its business logic is This requires software engineers to test the user interface to verify its correctness to the same extent they test the rest of the application But testing graphical user interfaces is a tedious task without standardized testing technologies engineers use for business logic verification like unit testing To address this shortcoming research groups applied the concept of model based testing to user interface testing In model based testing an abstraction of the actual graphical user interface is used and test sequences are generated from the model The model as a formal specification can also be checked by a model checker or pose as a test oracle to validate the correctness of the application Ideally such a model or specification can be generated or mined by an automated process This process is usually referred to as specification mining and relieves the test engineer of the task to keep the specification up to date Many tools and approaches have been proposed to target different kinds of applications and properties that the mining tool infers At Europe's biggest software company SAP where this thesis was manufactured many RIAs are being developed based on a user interface library called SAPUI5 This library helps developers to create uniform looking RIAs To test their graphical user interface and ensure quality software our approach supports this testing process by using a web crawler known from search engines to automatically infer a specification or model from these interfaces We achieved this by modifying the Ajax capable crawler Crawljax by A. Mesbah and using a new more efficient and modular state abstraction based on XPath expressions Our CrawljaxXT also addresses many bugs and shortcomings of the original Crawljax and thus allows for reliable creation of complete user interface models without overly detailed state abstractions Concluding we successfully evaluated our mined models and its testing capabilities with a modified version of the free model based testing tool Graphwalker
