Renewable Energy in the Middle East Michael Mason, Amit Mor, 2009-08-04 Energy insecurity is not normally associated with the Middle East. However, away from the oil-rich Persian Gulf, the countries of the eastern Mediterranean are particularly vulnerable. Their fossil fuel endowments are low, while their fractious relationships with each other have long fostered wider political insecurities. Focusing on the Jordan Basin, Israel, the Palestinian Territories, Lebanon, and Jordan, this timely volume addresses the prospects for the adoption of renewable energy in the oil-poor Middle East. Featuring regional energy experts, it offers an invaluable survey. After outlining the regional security context, this book first reviews renewable energy policy and practices in the Jordan Basin. It then considers options for greening energy use, including promising pilot projects in North Africa. The initiatives discussed encompass renewable energy finance, energy-efficient rural communities, and solar and wind energy. There is significant potential for an increase in the uptake of renewable energy technologies in the eastern Mediterranean. This window of opportunity has been created by high oil prices, energy infrastructure investment opportunities, and the UN climate change regime. In conclusion, the book considers the institutional conditions for collaborative decision-making on renewable energy. Such cooperation would deliver substantial security and human development benefits to the region and indeed the world.

Security and Environment in the Mediterranean Hans Günter Brauch, 2003 In this volume, security specialists, peace researchers, environmental scholars, demographers, as well as climate, desertification, water, food, and urbanisation specialists from the Middle East and North Africa, Europe, and North America, review security and conflict prevention in the Mediterranean. They also analyse NATO's Mediterranean security dialogue and offer conceptualisations on security and perceptions of security challenges as seen in North and South. The latter half of the book analyses environmental security and conflicts in the Mediterranean and environmental consequences of World War II, the Gulf War, the Balkan wars, and the Middle East conflict. It also examines factors of global environmental change, population growth, climate change, desertification, water scarcity, food, and urbanisation issues, as well as natural disasters. Furthermore, it draws conceptual conclusions for a fourth phase of research on human and environmental security and peace, as well as policy conclusions for cooperation and partnership in the Mediterranean in the 21st century.
