Rev Revue Technique Laguna 1 Phase 1:

Thermal Energy Storage Hafiz Muhammad Ali, Furqan Jamil, Hamza Babar, 2021-04-12 This book covers various aspects of thermal energy storage. It looks at storage methods for thermal energy and reviews the various materials that store thermal energy and goes on to propose advanced materials that store energy better than conventional materials. The book also presents various thermophysical properties of advanced materials and the role of thermal energy storage in different applications such as buildings, solar energy, seawater desalination, and cooling devices. The advanced energy storage materials have massive impact on heat transfer as compared to conventional energy storage materials. A concise discussion regarding current status, leading groups, journals, and the countries working on advanced energy storage materials has also been provided. This book is useful to researchers, professionals, and policymakers alike.

Quality Analysis of Additively Manufactured Metals Javad Kadkhodapour, Siegfried Schmauder, Felix Sajadi, 2022-11-30 *Quality Analysis of Additively Manufactured Metals: Simulation Approaches, Processes, and Microstructure Properties* provides readers with a firm understanding of the failure and fatigue processes of additively manufactured metals. With a focus on computational methods, the book analyzes the process-microstructure-property relationship of these metals and how it affects their quality while also providing numerical, analytical, and experimental data for material design and investigation optimization. It outlines basic additive manufacturing processes for metals, strategies for modeling the microstructural features of metals, and how these features differ based on the manufacturing process. More improvement of additively manufactured metals through predictive simulation methods and microdamage and micro failure in quasi-static and cyclic loading scenarios are covered, as are topology optimization methods and residual stress analysis techniques. The book concludes with a section featuring case studies looking at additively manufactured metals in automotive, biomedical, and aerospace settings. Provides insights and outlines techniques for analyzing why additively manufactured metals fail and strategies for avoiding those failures. Defines key terms and concepts related to the failure analysis, quality assurance, and optimization processes of additively manufactured metals. Includes simulation results, experimental data, and case studies.
