Efficiency Issues

o Routing is optimal for receivers at the sender's MAG that belong to the same LMA, and for the fixed Internet

o Routing detours via LMAs, whenever

- Mobile listener is attached to another MAG

- Mobile listener is associated with a different LMA

o No way to suppress the forwarding uplink to LMA

o Admission control/rate limiting may be desirable to prevent flooding LMAs

Wireless Networks and Industrial IoT Nurul Huda Mahmood,Nikolaj Marchenko,Mikael Gidlund,Petar Popovski,2020-12-11 This book provides a comprehensive overview of the most relevant research and standardization results in the area of wireless networking for Industrial IoT covering both critical and massive connectivity Most chapters in this book are intended to serve as short tutorials of particular topics highlighting the main developments and ideas as well as giving an outlook of the upcoming research challenges The book is divided into four parts The first part focuses on challenges enablers and standardization efforts for reliable low latency communication in Industrial IoT networks The next part focuses on massive IoT which requires cost and energy efficient technology components to efficiently connect a massive number of low cost IoT devices The third part covers three enabling technologies in the context of Industrial IoT Security Machine Learning Artificial Intelligence and Edge Computing These enablers are applicable to both connectivity types critical and massive IoT The last part covers aspects of Industrial IoT related to connected transportation that are important in for example warehouse and port logistics product delivery and transportation among industries Presents a comprehensive guide to concepts and research challenges in wireless networking for Industrial IoT Includes an introduction and overview of such topics as 3GPP standardization for Industrial IoT Time Sensitive Networking system dependability over wireless networks energy efficient wireless networks IoT security ML AI for Industrial IoT and connected transportation systems Features contributions by well recognized experts from both academia and industry **Sustainable and Eco-Friendly Process Management** Wendy Pei Qin Ng,Sivakumar Manickam,Sheik Mohammed Sulthan,Reddy Prasad D. M.,Kah Haw Law,2025-10-28 Process management a systematic approach to ensure that effective and efficient business processes are in place is a method used to align business and manufacturing processes with strategic goals This volume explores new technology techniques advances and issues in business process management in areas that include civil engineering electrical and electronic engineering mechanical engineering and petroleum and chemical engineering with the emphasis on providing eco friendly and sustainable solutions Industries looking for inspiration for new ideas in effective and eco friendly process management will find food for thought in this volume *Proposed Routing Protocol for Internet of Things* Omar A. Hamad,2014-11-17 This book shows the steps to design a routing protocol that handles the data delivery in wireless sensor networks which are employed to form the internet of things The research started by exploring different approaches with their disadvantages which lead to add enhancements and move to next approach The study aims to achieve perfect integration among different layers application Network MAC in order to reach the perfect solution of routing protocol *Including Context in a Routing Algorithm for the Internet of Things* Vítor Carvalho,Pedro Medeiros,2012 The Internet of Things assumes that a large number of devices which are used on a daily basis will eventually become connected to the Internet This scenario will provide room for a large set of new applications however the network connections of an enormous set of nodes

which can be connected and disconnected can move around and which have limitations with regards to their processing and communication capabilities raises the need for the development of new message routing algorithms different from those being in use today In this thesis a contribution is made towards the development of this type of algorithms In particular the idea which is tested is whether routing algorithms can improve their performance at various levels such as message delivery time number of messages lost power consumption etc if routing decisions can make use of the concept of Context

EFFICIENT ROUTING AND OFFLOADING DESIGN IN INTERNET-OF-THINGS SYSTEMS Ning Wang,2018 One of the fundamental challenges in Internet of Things systems is that network environment is always changing Conventional networking approaches do not consider the dynamic evaluation of the networks or consider the network dynamic as a mirror thing which may not be able to work or has a low efficiency in the Internet of Things systems This dissertation is uniquely built by considering the dynamic network environment and even taking advantage of the network dynamic to improve the network performances with a focus on the routing and offloading issues The first part is related to the routing design in the opportunistic mobile networks The opportunistic mobile network is expected to be an intrinsic part of the Internet of Things Devices communicate with each other autonomously without any centralized control and collaborate to gather share and forward information in a multi hop manner The main challenge in opportunistic mobile networks is due to intermittent connection and thus data is delivered through store carry forwarding paradigm In this dissertation We found an observation regarding the contact duration and proposed efficient data partitioning routing algorithms in the opportunistic mobile networks The second part is related to the offloading issues in the Internet of things systems With the surging demand on high quality mobile services at any time from anywhere how to accommodate the explosive growth of traffics with without existing network infrastructures is a fundamental issue Specifically We consider three different offloading problems i e cellular data offloading cloud task offloading and mobile worker task offloading problems in vehicular networks cloud and crowdsourcing platforms The common issue behind them is how to efficiently utilize the network resources in different scenarios by design efficient scheduling mechanisms For the cellular data offloading We explored the trade off of cellular offloading in the vehicular network For the cloud task offloading We conducted the research to adjust the offloading strategies wisely so that the total offloading cost is minimized For the worker task offloading in the smart cities We optimized the cost efficiency of the crowdsourcing platforms   *Studying Performance of RPL Routing for Internet of Things (LOT)* Asma Hamed Al-Kalbaniyah,2019   Service-Differentiated Cooperative Routing in the Internet of Things Milad Ayoub,2023 The IPv6 Routing Protocol for Low power and Lossy Networks RPL was designed to operate with different Internet of Things IoT applications ranging from regular to critical to alarm sporadic That is due to its ability to support service differentiation by forwarding multiple traffic classes via different logical network subdivisions called instances Cooperation among multiple instances running multiple applications can help in mitigating congestion which is the main factor degrading the Quality of
