Field guide to improve crop water productivity in small-scale agriculture Food and Agriculture Organization of the United Nations ,2020-04-01 By 2050 the world s population will reach 9.1 billion which requires an increase of food production by 70 percent compared to 2005. FAO 2018. Nearly all the increase will occur in developing countries where agriculture plays a major role to provide employment income and to improve food security. One of the major challenges of increasing food supply is the limited water resources. Agriculture as the driver of freshwater exploitation has therefore to be transformed into more resource efficient production. FAO 2003. The world s limited freshwater resources are potentially threatened by the expansion of agriculture. Increasing the potential output per amount of water used is an appropriate practice to improve production efficiency while protecting water resources. Therefore increasing the productivity of agricultural water use in a sustainable manner is essential to ultimately sustain the social and economic conditions of livelihoods. Crop water productivity has grown into one of the major approaches to cope with water scarcity and advance crop water relation. The number of conceptual frameworks and implications is ample but there is always a growing need to review the step by step approach beyond. In this Field guide practical pathways are presented to provide a comprehensive approach for assessing and improving crop water productivity in small scale agriculture. The Field guide draws lessons learned in three countries: Burkina Faso, Morocco and Uganda within the framework of FAO project Strengthening Agricultural Water Efficiency and Productivity at the African and Global Level funded by Swiss Agency for Development and Cooperation SDC.

Water management for sustainable agriculture Prof. T. Oweis, 2018-07-09 Comprehensive review of the range of water resources from groundwater and surface water to rainwater, floodwater and waste water. Water Harvesting in Sub-Saharan Africa William Critchley,John Gowing,2013-01-04 Agriculture in Sub Saharan Africa is constrained by highly variable rainfall frequent drought and low water productivity There is an urgent need heightened by climate change for appropriate technologies to address this problem through managing and increasing the quantity of water on farmers fields water harvesting This book defines water harvesting as a set of approaches which occupy an intermediate position along the water management spectrum extending from in situ moisture conservation to irrigated agriculture They generally comprise small scale systems that induce collect store and make use of local surface runoff for agriculture The authors review development experience and set out the state of the art of water harvesting for crop production and other benefits in Sub Saharan Africa This includes an assessment of water harvesting schemes that were initiated two or three decades ago when interest was stimulated by the droughts of the 1970s and 1980s These provide lessons to promote sustainable development of dryland agriculture in the face of changing environmental conditions Case studies from eight countries across Sub Saharan Africa provide the evidence base Each follows a similar format and is based on assessments conducted in collaboration with in country partners with a focus on attempts to promote adoption of water harvesting both horizontally spread and vertically institutionalization Introductory cross cutting chapters as well as an analytical conclusion are also included

Drip Irrigation Samuel Dasberg,Dani Or,2013-04-17 The aim of this book is quite ambitious here we attempt to bridge the gap between soH physicists agronomists horticulturists hydraulic engineers designers manufacturers and users of drip irrigation systems We believe that progress in drip irrigation hinges on the contributions of professionals made in all related disciplines and their cooperation The last decade has seen great development in the field of drip irrigation al though the drip irrigated area has not increased at the same rate as in the previous decade However our understanding of the processes involved in water and solute distribution and in plant response has increased vastly The tools for op timal design of drip systems have improved tremendously The main progress has been in the development and in the manufacture of sophisticated equipment not only improved types of emitters and laterals but also

auxiliary equipment such as new filtration systems controllers and sensors In this book we highlight the need to maintain a proper balance between the hydraulic design of drip systems and aspects of their management and maintenance Drip irrigation has a potential for high water use efficiency but many well designed systems suffer from bad management We are indebted to the late Eshel Bresler for his contribution to our understanding of water and solute movement under drip irrigation and its application to system design Some parts of a previous publication entitled Drip irrigation manual authored by S Dasberg and E
