Provides the latest information on regulatory issues regarding feed and fish health. Aquaculture: Enhancing Food Security and Nutrition Imtiaz Ahmed, Ishtiyahq Ahmad, 2025-07-01 This work compiles the impact of aquaculture in addressing the pressing challenges of global food security and nutritional deficits. The book provides a comprehensive understanding about how aquaculture is playing an instrumental role in ensuring a sustainable and nourished food source. In the face of a growing global population and increasing demands for protein-rich diets, traditional means of fish and its products from wild fisheries alone are inadequate, which warrant an alternate source that can fulfill the demand of fish for human consumption. Aquaculture emerges as a sustainable solution promising to bridge the widening gap between the supply and demand for fish and its products. Through meticulously researched insights and data, the book showcases how aquaculture systems are meeting the protein and nutritional needs of people worldwide. The book, entitled as Aquaculture: Enhancing Food Security and Nutrition, sheds light on the various forms of aquaculture, like freshwater, marine, and brackish water cultivation, highlighting their benefits and potential drawbacks. The focus is on in what way aquaculture practices can be environmentally responsible, economically viable, and socially inclusive, paving the itinerary for a balanced and sustainable food ecosystem. By exploring the advancements in aquaculture technologies, such as recirculating aquaculture systems (RAS) and integrated multi-trophic aquaculture (IMTA), the book also advocates the environmental-friendly and resource-efficient practices that enhance both food security and nutrition. Moreover, the book underscores the nutritional value of fish and its products, highlighting their rich nutrient composition, including protein, amino acids, fatty acids, vitamins, and minerals, which are fundamental for human health. It also offers insights about the incorporation of fish and its products in the food that can positively impact nutrition and combat malnutrition, especially in vulnerable human populations. *The role of aquaculture in the implementation of the Convention on Biological Diversity's Kunming-Montreal Global Biodiversity Framework* Bowser, L.; Himes-Cornell, A.; Buonfrate, C.; Behar, I., This technical paper summarizes how the aquaculture sector contributes to

the vision goals and targets of the Kunming Montreal Global Biodiversity Framework KMGBF with a view to ensuring that sustainable aquaculture systems and practices are not overlooked in efforts to achieve the KMGBF targets It does so by illustrating a more nuanced and complex relationship between aquaculture and biodiversity than that which is often conveyed and understood in the public sphere The paper then reviews the key risks to biodiversity from poor aquaculture practices and management as well as the key positive effects on biodiversity from sustainable aquaculture practices and management These risks and positive effects demonstrate where aquaculture is most strongly linked to the KMGBF and help to identify areas where aquaculture promotes its goals and targets key principle of the KMGBF is the need for a whole of society and whole of government approach to its implementation This document serves to inform engage encourage and empower stakeholders who are interested in advancing the sustainable use and conservation of biodiversity within aquatic systems It aims to broaden the conversation on biodiversity to include sustainable use sectors that are not typically involved in this case aquaculture so they may be recognized as relevant and important to engage with Importantly this document refrains from endorsing any specific stance on the KMGBF recognizing that the diverse opportunities for action outlined across the KMGBF targets must be seen in context Nevertheless it intends to showcase that aquaculture particularly sustainable aquaculture possesses the potential to effect positive change
