Critical topics such as the time value of money, the notion of risk and return and the complex nature of costs (fixed, semi fixed, variable and marginal) are discussed and illustrated with concrete examples. This is followed by an in depth presentation of the role of accounting in airlines. Ratio analysis is used to further analyze airline financial statements. Airline industry specific metrics such as cost per available seat mile (CASM) and revenue per revenue passenger mile (RRPM) are covered. The role of capital and asset management is then explained in the following chapters. The final chapters of the text present some important practical applications of the theoretical ideas presented earlier.
