Financial Modelling Joerg Kienitz, Daniel Wetterau, 2013-02-18 Financial modelling Theory Implementation and Practice with MATLAB Source J rg Kienitz and Daniel Wetterau Financial Modelling Theory Implementation and Practice with MATLAB Source is a unique combination of quantitative techniques the application to financial problems and programming using Matlab The book enables the reader to model design and implement a wide range of financial models for derivatives pricing and asset allocation providing practitioners with complete financial modelling workflow from model choice deriving prices and Greeks using semi analytic and simulation techniques and calibration even for exotic options The book is split into three parts The first part considers financial markets in general and looks at the complex models needed to handle observed structures reviewing models based on diffusions including stochastic local volatility models and pure jump processes It shows the possible risk neutral densities implied volatility surfaces option pricing and typical paths for a variety of models including SABR Heston Bates Bates Hull White Displaced Heston or stochastic volatility versions of Variance Gamma respectively Normal Inverse Gaussian models and finally multi dimensional models The stochastic local volatility Libor market model with time dependent parameters is considered and as an application how to price and risk manage CMS spread products is demonstrated The second part of the book deals with numerical methods which enables the reader to use the models of the first part for pricing and risk management covering methods based on direct integration and Fourier transforms and detailing the implementation of the COS CONV Carr Madan method or Fourier Space Time Stepping This is applied to pricing of European Bermudan and exotic options as well as the calculation of the Greeks The Monte Carlo simulation technique is outlined and bridge sampling is discussed in a Gaussian setting and for Levy processes Computation of Greeks is covered using likelihood ratio methods and adjoint techniques A chapter on state of the art optimization algorithms rounds up the toolkit for applying advanced mathematical models to financial problems and the last chapter in this section of the book also serves as an introduction to model risk The third part is devoted to the usage of Matlab introducing the software package by describing the basic functions applied for financial engineering The programming is approached from an object oriented perspective with examples to propose a framework for calibration hedging and the adjoint method for calculating Greeks in a Libor market model Source code used for producing the results and analysing the models is provided on the author s dedicated website <http://www.mathworks.de/matlabcentral/fileexchange/authors/246981> *Monte Carlo Frameworks* Daniel J. Duffy, Joerg Kienitz, 2011-08-02 This is one of the first books that describe all the steps that are needed in order to analyze design and implement Monte Carlo applications It discusses the financial theory as well as the mathematical and numerical background that is needed to write flexible and efficient C code using state of the art design and system patterns object oriented and generic programming models in combination with standard libraries and tools Includes a CD containing the source code for all examples It is strongly advised that you experiment with the code by compiling it and

extending it to suit your needs Support is offered via a user forum on www.datasimfinancial.com where you can post queries and communicate with other purchasers of the book This book is for those professionals who design and develop models in computational finance This book assumes that you have a working knowledge of C Interest Rate Derivatives Explained J. Kienitz, 2014-12-05 Aimed at practitioners who need to understand the current fixed income markets and learn the techniques necessary to master the fundamentals this book provides a thorough but concise description of fixed income markets looking at the business products and structures and advanced modeling of interest rate instruments
