**Sources of Variation in First Language Acquisition** Maya Hickmann, Edy Veneziano, Harriet Jisa, 2018-02-22 Developmental research has long focused on regularities in language acquisition minimizing factors that might be responsible for variation Although researchers are now increasingly concerned with one or another of these factors this volume brings together research on three different sources of variation language specific properties the nature of the input to children across contexts and several aspects of the learners themselves Chapters explore these sources of variation within an interdisciplinary and comparative approach allying theories and methodologies stemming from linguistics psycholinguistics developmental psychology and neuroscience The comparative perspective involves different languages contexts of use types of learners first second language acquisition monolingual bilingual learners autism language impairment as well as vocal and visuo gestural communicative modalities co verbal gestures sign language acquisition The volume points to the need to enhance interdisciplinary research using complementary methodologies to further examine sources of variation and to integrate variation into a more general developmental theory

This book addresses the issue of language contact in the context of child language acquisition Elizabeth Lanza examines in detail the simultaneous acquisition of Norwegian and English by two first born children in families living in Norway in which the mother is American and the father Norwegian She connects psycholinguistic arguments with sociolinguistic evidence adding a much needed dimension of real language use in context to the psycholinguistic studies which have dominated the field She draws upon evidence from other studies to support her claims concerning language dominance and the child's differentiation between the two languages in relation to the situation interlocutor and the communicative demands of the context She also addresses the question of whether or not the language mixing of infant bilingualism is conceptually different from the codeswitching of older bilinguals thus helping to bridge the gap between these two fields of study

*Encyclopedia of Language Development* Patricia J. Brooks,Vera Kempe,2014-03-28 The progression from newborn to sophisticated language user in just a few short years is often described as wonderful and miraculous What are the biological cognitive and social underpinnings of this miracle What major language development milestones occur in infancy What methodologies do researchers employ in studying this progression Why do some become adept at multiple languages while others face a lifelong struggle with just one What accounts for declines in language proficiency and how might such declines be moderated Despite an abundance of textbooks specialized monographs and a couple of academic handbooks there has been no encyclopedic reference work in this area until now The Encyclopedia of Language Development covers the breadth of theory and research on language development from birth through adulthood as well as their practical application Features This affordable A to Z reference includes 200 articles that address such topic areas as theories and research tradition biological perspectives cognitive perspectives family peer and social influences bilingualism special populations and disorders and more All articles signed and authored by key figures in the field conclude with cross reference links and suggestions for further reading Appendices include a Resource Guide with annotated lists of classic books and articles journals associations and web sites a Glossary of specialized terms and a Chronology offering an overview and history of the field A thematic

*Usage-Based Approaches to Language Acquisition and Language Teaching* Jacqueline Evers-Vermeul, Elena Tribushinina, 2017-03-06 Although usage based approaches have been successfully applied to the study of both first and second language acquisition to monolingual and bilingual development and to naturalistic and instructed settings it is not common to consider these different kinds of acquisition in tandem The present volume takes an integrative approach and shows that usage based theories provide a much needed unified framework for the study of first second and foreign language acquisition in monolingual and bilingual contexts The contributions target the acquisition of a wide range of linguistic phenomena and critically assess the applicability and explanatory power of the usage based paradigm The book also systematically examines a range of cognitive and linguistic factors involved in the process of language development and relates relevant findings to language teaching Finally this volume contributes to the assessment and refinement of empirical methods currently employed in usage based acquisition research This book is of interest to scholars of language acquisition language pedagogy developmental psychology as well as Cognitive Linguistics and Construction Grammar [International Encyclopedia of Linguistics](#) William J. **The Categorization of Spatial Entities in Language and Cognition** Michel Aurnague, Maya Hickmann, Laure Vieu, 2007-01-01 Despite a growing interest for space in language most research has focused on spatial markers specifying the static or dynamic relationships among entities verbs prepositions postpositions case markings Little attention has been paid to the very properties of spatial entities their status in linguistic descriptions and their implications for spatial cognition and its development in children This topic is at the center of this book that opens a new field by sketching some major theoretical and methodological directions for future research on spatial entities Brought together linguistic descriptions of spatial

systems formal accounts of linguistic data and experimental findings from psycholinguistic studies all couched within a wide cross linguistic perspective Such an interdisciplinary approach provides a rich overview of the many questions that remain unanswered in relation to spatial entities while also throwing a new light on previous research focusing on related topics concerning space and or the relation between language and cognition

**Cognitive Pragmatics** Hans-Jörg Schmid, 2012-08-31

Speakers tend to compose their utterances in such a way that the message they want to get across is hardly ever fully encoded by the meanings of the words and the grammar they use. Instead, speakers rely on hearers adding conceptual and emotive content while interpreting the contextually appropriate meanings and intentions behind utterances. This insight, which is of course particularly relevant in all kinds of indirect, figurative or humorous talk, lies at the heart of the linguistic discipline of pragmatics. If pragmatics is the study of meaning in context, then cognitive pragmatics can be broadly defined as encompassing the study of the cognitive principles and processes involved in the construal of meaning in context. While it would seem only natural that pragmatics as such should have addressed such cognitive issues, anyway, it has mainly been due to the historical rooting of this discipline in the philosophy of language that psychological aspects have not been in the pragmatic limelight to date. Being part of the 9 volume series *Handbooks of Pragmatics*, this volume is the first to systematically survey this terrain from a wide range of perspectives. It collects state-of-the-art contributions by leading experts from the fields of pragmatics, psycholinguistics, cognitive linguistics, clinical linguistics and historical linguistics. The volume is divided into four parts which tackle the following questions:

Part I: The cognitive principles of pragmatic competence. What are the general cognitive principles underlying pragmatic competence, i.e. the skill to arrive at context-dependent meanings of utterances? What are the cognitive underpinnings of language users' ability to compute or infer intended meanings in the role of hearers and to give hints as to how to decode intended meanings in the role of speakers?

Part II: The psychology of pragmatics. What are the actual cognitive processes taking place during online construal of meaning in context on the basis of encoded messages? How is pragmatic competence acquired in childhood? What are the types, sources and effects of pragmatic disorders, i.e. impairments of pragmatic competence?

Part III: The construal of non-explicit and non-literal meaning in context. What are the cognitive principles and processes involved in the construal of meanings of non-explicit and indirect utterances? How do we process figurative meanings, humour and gestures?

Part IV: The emergence of linguistic structures from meaning in context. What are the repercussions of the repeated construal of context-dependent meanings on linguistic structures and the linguistic system? How does the system change under the influence of the construal of meanings in social situations?
