### Specification references

- 3.2.1 e)
- 3.2.3 e) f)
- M4.1 Use angles in regular 2D and 3D structures
- M4.2 Visualise and represent 2D and 3D forms including 2D representations of 3D objects
- M4.4 Use Pythagoras' theorem and the angle sum of a triangle

### Learning outcomes

After completing the worksheet you should be able to:

- demonstrate knowledge and understanding of the conditions for equilibrium under the action of forces
- sketch a triangle of forces for an object in equilibrium
- make a scale drawing of a triangle of forces and apply this to deduce the magnitude and direction of a force
- use a triangle of forces to calculate the magnitude and direction of a force.

## Conditions for equilibrium

### Introduction

An object is in equilibrium when the resultant force on it is zero.

The pendulum bob in Figure 1 will not stay in its current position if you remove your finger, because the tension,  $T$ , and weight,  $W$ , have a resultant force,  $R$ , that will return the string to a vertical position. (You can find more about resultant forces in '2 Calculation sheet: Using scalars and vectors'.) When the force from the finger,  $F$ , is equal and opposite to the resultant,  $R$ , then the bob is in equilibrium and the three forces,  $T$ ,  $F$ , and  $W$ , form a triangle of forces.

Figure 1

If three forces are acting on an object and it is in equilibrium, then the forces will always form a closed triangle of forces.
