Robots, Drones, UAVs and UGVs for Operation and Maintenance Diego Galar,Uday Kumar,Dammika Seneviratne,2020-05-07 Industrial assets such as railway lines roads pipelines are usually huge span long distances and can be divided into clusters or segments that provide different levels of functionality subject to different loads degradations and environmental conditions and their efficient management is necessary The aim of the book is to give comprehensive understanding about the use of autonomous vehicles context of robotics for the utilization of inspection and maintenance activities in industrial asset management in different accessibility and hazard levels The usability of deploying inspection vehicles in an autonomous manner is explained with the emphasis on integrating the total process Key Features Aims for solutions for maintenance and inspection problems provided by robotics drones unmanned air vehicles and unmanned ground vehicles Discusses integration of autonomous vehicles for inspection and maintenance of industrial assets Covers the industrial approach to inspection needs and presents what is needed from the infrastructure end Presents the requirements for robot designers to design an autonomous inspection and maintenance system Includes practical case studies from industries Who Pays for Car Accidents? Estate of Jerry J. Phillips,Stephen Chippendale,2001-12-18 In this new volume two lawyers debate which kind of automobile insurance is the best no fault or tort liability This book presents in one place all the legal political historical and financial arguments about the two types of auto insurance Under the fault system currently used by thirty seven states tort law provides that the party at fault in the accident pays the full damages of accident victims Jerry J Phillips favors this system arguing that it allows for fair compensation to the injured and deters drivers from dangerous behavior on the road Stephen Chippendale counters this claim with the argument that tort law based insurance combines high cost and low benefits and that those who truly profit from it are the lawyers representing injured clients while their claims clog up the court system A better solution he proposes would be Auto Choice a plan under which consumers would choose whether or not they wished to be eligible for damages from pain and suffering With civility and respect these two legal scholars present thoughtful and thorough arguments on both sides of the debate giving readers a balanced view of an issue that affects nearly every American It will be of particular value to those in the fields of law policy and insurance

Traffic and Transport Psychology Geoffrey Underwood,2005-06-09 Just as our transport systems become more and more important to our economic and social well being so they become more and more crowded and more at risk from congestion disruption and collapse Technology and engineering can provide part of the solution but the complete solution will need to take account of the behaviour of the users of the transport networks The role of psychologists in this is to understand how

people make decisions about the alternative modes of transport and about the alternative routes to their destinations to understand how novice and other vulnerable users can develop safe and effective behaviours how competent users can operate within the transport system optimally and within their perceptual and cognitive limitations The contributions to this volume address these issues of how the use of our transport systems can be improved by taking into account knowledge of the behaviour of the people who use the systems Topics discussed include driver training and licensing driver impairment road user attitudes and behaviour enforcement and behaviour change driver support systems and the psychology of mobility and transport mode choice This work will be of value not only to psychologists but to all transport professionals interested in the application of psychology to traffic
