The Great Transition Mauro Bonaiuti, 2014 Recent events including the financial crisis and the gradual lessening of the planet's natural resources have raised the fundamental question as to whether the capitalist market system can survive its own contradictions or whether we are witnessing the outset of a profound change in civilization By deploying the tools of the science of complexity alongside those of historical research Mauro Bonaiuti tackles this basic question posed against a backdrop of declining marginal returns where growth in the complexity of industrial military and bureaucratic institutional apparatuses is thought to have led to progressive increases in economic social and environmental costs In this framework the economic crisis we are traversing grave as it is could be interpreted not as a simple cyclical crisis from which it is possible to escape by the traditional policies of supporting growth but as the outcome of a passage of civilization inscribed in the long term evolutionary dynamics of capitalism After the crisis that started in 2008 with millions of people unemployed with the failure of the economy to pick up and with the ever growing sense of precariousness and insecurity we are beginning to suspect that we are facing something more than a cyclical crisis

Steppacher, 2011-12-12 The human imprint on the biosphere has become so pronounced in recent years that there has been talk of a new geological era the Anthropocene Gathering contributions from some of the world's foremost heterodox economists this book explores the new economic directions and paradigms that are required to respond to this crisis

The Origins of Ecological Economics, Post-growth Economics and Society Isabelle Cassiers, Kevin Maréchal, Dominique Méda, 2017-10-30 We stand on the threshold of a post growth world one in which the relentless pursuit of economic growth has ceased to constitute a credible societal project The symptoms that mark the end of an era are clear and incontrovertible a return to the regularities of the past is illusory The pursuit of economic growth no longer constitutes a credible societal project for ecological social and geopolitical reasons Edited by an impressive array of experts this book identifies several areas in which we must fundamentally rethink our societal organisation They ask what it means to abandon the objective of economic growth how we can encourage the emergence of other visions to guide society how global visions and local transition initiatives should be connected which modes of governance should be associated with the required social and technological innovations Alongside the necessary respect of ecological limits and

equity in distribution the promotion of autonomy involving all in the building of socio political norms could serve for guidance The topics addressed over the chapters range from the future of work to the de commodification of economic relations the search for new indicators of progress to decentralized modes of governance and from the circular economy to polycentric transitions Each contribution brings a unique perspective a piece of a larger puzzle to be assembled Post growth Economics and Society is an important volume to those who study ecological economics political economy and the environment and society It invites theorists as much as practitioners to re explore the roots of our societal goals and play an active role in the systemic shift to come *On Georgescu-Roegen's Contribution to Ecological Economics* Philip A.
