Examining International Land Use Policies,

Changes, and Conflicts Hasnat, G. N. Tanjina, Hossain, Mohammed Kamal, 2020-11-06 Though conflicts continue to arise over land use and land cover changes the conversion of forest land to cropland or other land uses such as housing and urban development have been on the rise in recent years Decisions regarding land use and land cover influence climate change as well as various natural processes While proper changes can minimize the effects and speed of climatic changes the continued adverse changes may be accelerating the deterioration of the world s condition Examining International Land Use Policies Changes and Conflicts presents the latest research on the present status of land use and land cover changes throughout the

world in order to determine appropriate land use policies that can protect earth's present and future condition. The findings of the studies investigate the conflicts behind the land tenure and land uses in different countries of the world and examines existing policies and the reasons behind changes in them. Ultimately the book provides readers with knowledge on how land can be managed in a sustained manner, how landscape models are helpful for predicting and determining future land uses, how land can be managed with the best architectural measures and how urban forestry is helpful for better environmental management and adapting or mitigating climate change effects. Land users, agriculturalists, urban planners, policymakers, government officials, researchers, academicians, and students looking to improve their understanding of this topic for better use of land in the future will find this book to be an asset to their current research. **Building Earth Observation**

This book helps readers understand the tradeoffs in selecting various sensor parameters for electro-optical sensors and how each parameter is optimally selected. It provides a detailed account of the actions required to make a camera system space worthy. The book includes case studies based on the IRS sensors and is a good companion for a system designer. **SATELLITE COMMUNICATION** K. N. RAJA RAO, 2013-01-31

This new edition, an up-to-date and comprehensive title on the rapidly expanding field of satellite communication, is aimed at giving important aspects of space and satellite communication. It starts from fundamental concepts and helps reader to design satellite links. The book provides a smooth flow from satellite launch to various applications of satellite. It contains satellite systems, important parameter calculations and design concepts. The emphasis is on geostationary satellites. The text is organized in such a manner that the reader starts with orbiting parameters and ends at designing a complete multiple access links. With all of the latest information incorporated and several key pedagogical attributes included, this textbook is an invaluable learning tool for the engineering students of electronics and communication. New to This Edition: Important design equations have been listed separately. Three new chapters: Reliability requirements in satellites, Remote sensing satellites and Error control coding have been included. New Sections are added in Chapters 1, 2 and 3. A brief discussion on digitized video transmission is included in Chapter 4. **Fundamentals of Cartography (Second Revised and Enlarged Edition)** R.P.

Misra, 2014-01-01 The first edition of Fundamentals of Cartography was published in 1969 by Prasara University of Mysore. It was reprinted by the Concept Publishing Company, New Delhi. While the book remained in currency, the cartographic processes changed drastically when information technology brought a sea of change in the sources of information, drafting of maps and printing processes. Drawing maps by hand became obsolete; surveying, whether ground or aerial, was no longer the only major source of information. In view of these changes, it became necessary to bring out a new edition. Realising that unless one knows directions, scales, projections, coordinates, ground and air surveys, one would fail to understand the proper use of modern information technology in the drawing of the maps. Thus the contents of 1969 edition are

retained and new chapters have been added to update the book In Part II of the book a chapter on Remote Sensing and Satellite Imageries has been added and Part V contains chapters on Computer Aided Cartography Geographic Information System GIS Land Information System LIS and Global Positioning System GPS **Space and Beyond** B. N.
