*Beyond Programming* Bruce I. Blum, 1996-01-11 This book provides a unique examination of the software development process arguing that discipline still dominated by methods conceived in the framework of older technologies must undergo a fundamental reexamination of its guiding principles in order for significant progress to take place To gain fresh insights into how we ought to direct future research the author begins with a search for first principles The book begins with an exploration of the scientific foundations of computer technology then examines design from the perspective of practitioners The book also offers a critique of the methods employed in software development and an evaluation of an alternate paradigm that has been used successfully for 14 years The concepts reviewed here comprise a set of core readings for understanding the research and development

challenges that will confront computer technology in the 21st century and will be of great interest to computer science researchers and educators graduate students and software engineers      *Renewable Energy From the Ocean* William H. Avery, Chih Wu, 1994-03-17 Scientists and engineers around the world are striving to develop new sources of energy One source ocean thermal energy conversion has virtually unlimited potential It is based on techniques that exploit heat produced by solar energy that may in turn be used to produce fuel and electricity This book reviews the status and background of this promising technology William H Avery is the leading expert in this field and his co author Chih Wu is an authority on heat engine performance Together they describe the workings of an OTEC power plant and how such a system might be implemented as part of a futuristic national energy strategy The book is the only detailed presentation of basic OTEC technology its testing and improvement It is based on extensive development initiatives undertaken internationally during the period from 1974 through 1985 The book offers a thorough assessment of the economics of OTEC in comparison with other energy production methods It will be of interest to a wide range of professionals in energy research power and mechanical engineering and to upper level undergraduate students taking courses in these fields      *Whitaker's Books in Print* ,1998

Khazanov, 2016-11-17 Space weather is one of the most significant natural hazards to human life and health Conditions of the sun and in the solar wind magnetosphere ionosphere and thermosphere can influence the performance and reliability of space borne and ground based technological systems If conditions in the space environment are adverse they can cause disruption of satellite operations communications navigation and electric power distribution grids leading to a variety of socioeconomic losses This book provides an overview of our current knowledge and theoretical understanding of space weather formation and covers all major topics of this phenomena from the sun to the Earth s ionosphere and thermosphere thus providing a fully updated review of this rapidly advancing field The book brings together an outstanding team of internationally recognised contributors to cover topics such as solar wind the earth s magnetic field radiation belts the aurora spacecraft charging orbital drag and GPS      *ASEE Prism* ,1994      **The Scientist** ,1994      *Scientific and Technical Aerospace Reports* ,1977      **Forthcoming Books** Rose Army, 2004      *ERDA Energy Research Abstracts* United States. Energy Research and Development Administration, 1976      *Spacecraft Dynamics and Control* Enrico Canuto, Carlo Novara, Donato Carlucci, Carlos Perez-Montenegro, Luca Massotti, 2018-03-08 Spacecraft Dynamics and Control The Embedded Model Control Approach provides a uniform and systematic way of approaching space engineering control problems from the standpoint of model based control using state space equations as the key paradigm for simulation design and implementation The book introduces the Embedded Model Control methodology for the design and implementation of attitude and orbit control systems The logic architecture is organized around the embedded model of the spacecraft and its surrounding environment The model is compelled to include disturbance dynamics as a repository of the

uncertainty that the control law must reject to meet attitude and orbit requirements within the uncertainty class The source of the real time uncertainty estimation prediction is the model error signal as it encodes the residual discrepancies between spacecraft measurements and model output The embedded model and the uncertainty estimation feedback noise estimator in the book constitute the state predictor feeding the control law Asymptotic pole placement exploiting the asymptotes of closed loop transfer functions is the way to design and tune feedback loops around the embedded model state predictor control law reference generator The design versus the uncertainty class is driven by analytic stability and performance inequalities The method is applied to several attitude and orbit control problems The book begins with an extensive introduction to attitude geometry and algebra and ends with the core themes state space dynamics and Embedded Model Control Fundamentals of orbit attitude and environment dynamics are treated giving emphasis to state space formulation disturbance dynamics state feedback and prediction closed loop stability Sensors and actuators are treated giving emphasis to their dynamics and modelling of measurement errors Numerical tables are included and their data employed for numerical simulations Orbit and attitude control problems of the European GOCE mission are the inspiration of numerical exercises and simulations The suite of the attitude control modes of a GOCE like mission is designed and simulated around the so called mission state predictor Solved and unsolved exercises are included within the text and not separated at the end of chapters for better understanding training and application Simulated results and their graphical plots are developed through MATLAB Simulink code [ERDA](#) [Energy Research Abstracts](#) United States.
