Frank Lloyd Wright's Usonian Houses Carla Lind, 1994 One of the architectural challenges for Frank Lloyd Wright was how to provide moderate cost houses that were as good as expensive ones His solution was the Usonian house a term he coined for the United States of North America With their horizontal floor plans open living spaces walls of windows carports and patios these houses became models for many houses that now cover the American landscape Here are a dozen examples of Wright's Usonian house

Usonia Alvin Rosenbaum, 1993 The author's boyhood home in Alabama one of Wright's Usonian houses is the point of departure for the narrative which interweaves intriguing details of Ford's interest in setting up a planned community and later of the development of the Tennessee Valley Authority the single most important regional development in the United States Just as the Roosevelt administration was putting together its plans for TVA Wright was imagining an American utopia Broadacre City where every family would be guaranteed a lush green acre of land

Evolving Transcendentalism in Literature and Architecture Naomi Tanabe Uechi, 2014-08-26 *Evolving Transcendentalism in Literature and Architecture* Frank Furness Louis Sullivan and Frank Lloyd Wright demonstrates how American architects read literature and transformed abstract philosophy and literary form into physical substance Furness Sullivan and Wright were inspired by such Transcendentalists as Ralph Waldo Emerson Henry David Thoreau and Walt Whitman and attempted to embody the concepts of nature American identity and Universalism in their architecture Notably this book is the first attempt to concentrate on analyzing these architects works from the perspective of Transcendentalism This is also the first time that reproductions of Wright's copy of *Leaves of Grass* and several tape records of Wright's Sunday morning talks both held in the Frank Lloyd Wright Archive have been published Importantly these Transcendentalist architects philosophy has been influential in the development of contemporary environmental architects all over the world including Paolo Soleri an Italian American and Glenn Murcutt an Australian both of whom are discussed in the final chapter of this book

Studies in Tectonic Culture Kenneth Frampton, 2001-08-24 Composed of ten essays and an epilogue that trace the

history of contemporary form as an evolving poetic of structure and construction the book's analytical framework rests on Frampton's close readings of key French and German and English sources from the eighteenth century to the present Kenneth Frampton's long awaited follow up to his classic *A Critical History of Modern Architecture* is certain to influence any future debate on the evolution of modern architecture *Studies in Tectonic Culture* is nothing less than a rethinking of the entire modern architectural tradition The notion of tectonics as employed by Frampton the focus on architecture as a constructional craft constitutes a direct challenge to current mainstream thinking on the artistic limits of postmodernism and suggests a convincing alternative Indeed Frampton argues modern architecture is invariably as much about structure and construction as it is about space and abstract form Composed of ten essays and an epilogue that trace the history of contemporary form as an evolving poetic of structure and construction the book's analytical framework rests on Frampton's close readings of key French and German and English sources from the eighteenth century to the present He clarifies the various turns that structural engineering and tectonic imagination have taken in the work of such architects as Perret Wright Kahn Scarpa and Mies and shows how both constructional form and material character were integral to an evolving architectural expression of their work Frampton also demonstrates that the way in which these elements are articulated from one work to the next provides a basis upon which to evaluate the works as a whole This is especially evident in his consideration of the work of Perret Mies and Kahn and the continuities in their thought and attitudes that linked them to the past Frampton considers the conscious cultivation of the tectonic tradition in architecture as an essential element in the future development of architectural form casting a critical new light on the entire issue of modernity and on the place of much work that has passed as avant garde A copublication of the Graham Foundation for Advanced Studies and The MIT Press

A.* examines Fischer's important yet overlooked contributions to Southern California architecture As the whereabouts of Fischer's archives remain unknown Volker M Welter grounds the designer's California works in comparison with his pre exile projects and the compositions of fellow architects in California In the 1920s Fischer created experimental working class housing estates in Germany that pioneered ecological construction and living practices Comparable to their predecessors Fischer's California buildings revolve around the functioning the organization of a home as he defined domestic architecture in 1926 Featuring new photography and detailed architectural plans this book is an original contribution to the literature on Southern California's built heritage *The*
