Beyond Barter: Lectures In Monetary Economics After 'Rethinking' John Smithin, 2022-04-21 The conventional macroeconomic theory of the late twentieth and early twenty first century based on the assumption that the working of complex monetary economy could be analysed on the same principles as those of barter exchange has demonstrably failed This book provides a thorough rethinking of the nature of a monetary economy It builds upon a complete theory of the domestic and international monetary macro economy and of macroeconomic policy for the modern age Central to the analysis is the idea that a successful market economy requires an endogenous supply of money via the banking system Therefore to achieve macroeconomic stability the book proposes the targeting of real interest rates under a regime of flexible exchange rates or fixed but adjustable exchange rates as the main goal of monetary policy along with a range of innovative fiscal and trade policies to promote economic growth and thereby achieve full employment and a fair distribution of income

Measuring Inequality Philip B. Coulter,2019-09-19 The impetus to write this book grew out of curiosity and frustration For a research project in which I was involved I wanted to select an appropriate index to measure inequality so I searched for a book that comprehensively reviewed the available indexes identified their operational similarities and differences and clarified their theoretical underpinnings Discovering that no such book existed I became increasingly frustrated and curious It became evident that I would have to undertake my own systematic review of the literature presumably in my own discipline in order to identify the alternative measures and choose an appropriate one on the basis of proper theoretical and methodological criteria This effort led to additional frustrating discoveries First I encountered a bewildering abundance of inequality indexeswell over fifty distinguishable measures Second my review of the methodological literature on inequality measurement took me through the issues of literally scores of professional journals in five academic disciplines economics geography political science sociology and statistics Third although I found some cross disciplinary referencing of inequality measures by and large each discipline s inequality measurement remained insulated from that of other disciplines
