betrieblichen Abläufen zu erfassen Mittels moderner Analyseverfahren wie dem Complex Event Processing CEP können relevante Ereignismuster hieraus identifiziert und korrespondierende Maßnahmen unverzüglich initiiert werden. Vielversprechend erweist sich zukünftige Geschäftsereignisse zu prognostizierten und hierdurch eine proaktive Steuerung von Unternehmensabläufen zu realisieren. Hierzu muss eine Kombination aus CEP und prädiktiven Analysen in die operativen Entscheidungs- und Steuerungsprozesse verankert werden. Dies bedingt einen Veränderungsprozess in Unternehmen und somit die Integration in das Geschäftsprozessmanagement. Das von Julian Krumeich konstruierte Referenzmodell dient als Gestaltungsvorlage für die Realisierung eines proaktiven ereignisgesteuerten Geschäftsprozessmanagements. Das Modell umfasst Komponenten zur Modellierung von komplexen Ereignismustern sowie deren automatisierten Transformation in EPL Spezifikationen. Zudem ermöglicht ein methodisches Vorgehen Prognosepotenziale in Geschäftsprozessen zu identifizieren, um auf dieser Grundlage reaktive Prozesse durch die Einbettung proaktiver Bestandteile in proaktive Prozesse zu transformieren. Die Praxistauglichkeit des Referenzmodells wird anhand eines Anwendungsbeispiels aus der Stahlproduktion validiert und die Umsetzbarkeit durch Prototypen unterstrichen. Dieses Buch erweist sich nicht nur für Wissenschaftler von Interesse, sondern dient auch Lesern aus der Unternehmenspraxis als Impulsgeber zur Bewältigung der notwendigen Transformation ihrer Geschäftsprozesse.

Aehnlichkeitsbasierte Suche in Geschäftsprozessmodelldatenbanken Schoknecht, Andreas, 2019-01-07. The reuse of process models is a promising technique to reduce modelling effort. Yet finding similar models in large model collections is not feasible manually. A search functionality for relevant models which can be used as a template is therefore helpful. This work describes multiple techniques for finding similar process models and activities in process model repositories.

Impact of Artificial Intelligence in Business and Society Francesco Paolo Appio, Davide La Torre, Francesca Lazzeri, Hatem Masri, Francesco Schiavone, 2023-07-31. Belonging to the realm of intelligent technologies, it is increasingly accepted that artificial intelligence (AI) has evolved from being merely a development standpoint in computer science. Indeed, recent reports and academic publications show that we are clearly on the path toward pervasive AI in both business and society. Organizations must adopt AI to maintain a competitive advantage and explore opportunities for unprecedented innovation. This book focuses on understanding the wide range of opportunities as well as the spectrum of challenges AI brings in different business contexts and society at large. The book highlights novel and high-quality research in data science and business analytics and examines the current and future impact of AI in business and society. The authors bridge the gap between business and technical perspectives and demonstrate the potential and actual impact on society. Embracing applied qualitative and quantitative research as well as field experiments and data analysis, the book covers a broad range of topics including but not limited to human-centered AI, product and process innovation, corporate governance, AI and ethics, organizational performance and entrepreneurship. This comprehensive book will be a valuable resource for researchers, academics and postgraduate students across AI technology and innovation management and a wide range of

Airport Baggage Handling Systems Brahim Rekiek, 2023-10-19. The competition between airports demands higher quality services to satisfy passengers. A Baggage Handling System (BHS) serves functions such as baggage sorting, screening, and storage. A successful BHS means bags move between areas as travellers do. Handlers load, unload bags, and transfer them between the airport's areas. Automation can save money and bring safety and operational benefits. Warehouses, as well as the automotive industry, are more advanced technologically in comparison to the airport, and especially the baggage handling business. The concept of the Baggage Factory (BF) is an approach based on Industry 4.0 that simplifies the processes from the moment passengers drop off their bags at check-in till the destination chutes, carousels, and so forth.

Airport Baggage Handling Systems Using the Baggage Factory Approach to Support AI Optimisation Decisions and Design Processes introduces the features of the BF concept and presents how BHS designers can use AI technology to tackle many BHS problems and concerns. The book bridges the gap between airport BHS designers and experts in AI and optimisation. It describes in detail the field of baggage handling using algorithms for sorting bags or optimising the flow. The way the systems are designed is discussed, and a behind-the-scenes look at the BHS industry and how it affects the daily lives of travellers is presented. International and multidisciplinary in approach, this book is an ideal resource for practitioners, students, and researchers involved in the air transportation industry.
