*Spectroscopic Methods in Food Analysis* Adriana S. Franca, Leo M.L. Nollet, 2017-12-14 Given the inherent complexity of food products most instrumental techniques employed for quality and authenticity evaluation e.g. chromatographic methods are time demanding expensive and involve a considerable amount of manual labor Therefore there has been an increasing interest in simpler faster and reliable analytical methods for assessing food quality attributes Spectroscopic Methods in Food Analysis presents the basic concepts of spectroscopic methods together with a discussion on the most important applications in food analysis The determination of product quality and authenticity and the detection of

adulteration are major issues in the food industry causing concern among consumers and special attention among food manufacturers. As such, this book explains why spectroscopic methods have been extensively employed to the analysis of food products as they often require minimal or no sample preparation, provide rapid and on-line analysis and have the potential to run multiple tests on a single sample i.e. non-destructive. This book consists of concepts related to food quality and authenticity that are quite broad given the different demands of the manufacturer, the consumer, the surveillance and the legislative bodies that ultimately provide healthy and safe products.

**Analysis of Peptides and Proteins by Electrophoretic Techniques** Angela R. Piergiovanni, José Manuel Herrero-Martínez, 2019-07-23 The characterization of peptides and proteins is central to understanding their function and expression in biological matrices. Moreover, these macromolecules are important biomarkers of many human diseases. In recent years, the performance of separation techniques based on electromigration have significantly increased. The development of microdevices has reduced sample consumption and waste production while high sensitivity detectors such as mass spectrometry (MS) or laser induced fluorescence (LIF) have significantly improved with regards to separation efficiency and detection limits. All of these advancements have led to appreciably enlarged fields of application. Nowadays, a multitude of studies using separation techniques based on electromigration to study proteins and peptides from numerous real matrices are available in the literature. This Special Issue covers the most recent knowledge and advances in the study of peptides and proteins using several electrophoresis techniques as well as the characterization of relevant proteins and peptides in application areas such as clinical studies, functional foods and toxicology.
