**Toxicologia: uma abordagem multidisciplinar - Volume I** Tatiana Paschoalette Rodrigues Bachur, Desde os períodos mais remotos nas civilizações primitivas substâncias presentes na natureza eram utilizadas para fins diversos como a caça e extermínio de inimigos Com a evolução da humanidade muitos esforços têm sido feitos para o avanço no conhecimento acerca do uso seguro de substâncias presentes em diversos contextos da vida através da identificação e caracterização do potencial tóxico e das condições de exposição a estas substâncias que podem repercutir em perigo para os seres vivos Deste modo o objetivo principal destes avanços consiste em prevenir agravos relacionados ao contato ou exposição com substâncias potencialmente tóxicas Em nosso cotidiano estamos constantemente expostos a potenciais agentes tóxicos mesmo que não percebamos a exemplo dos medicamentos alimentos substâncias presentes nos meios ocupacional e ambiental além das substâncias produzidas e usadas intencionalmente por exercer atividades tóxicas no organismo como as drogas de abusos ilícitos e ilícitos Assim a Toxicologia surge como a ciência que em suas diferentes áreas de atuação busca compreender a natureza os mecanismos das ações tóxicas e as alterações biológicas resultantes da exposição de um organismo vivo a diferentes substâncias químicas No contexto da saúde humana o papel principal desta ciência é a avaliação de risco e o estabelecimento de medidas preventivas e corretivas para a utilização segura destas substâncias pelo homem O estudo acerca de acidentes por animais peçonhentos também se enquadra no escopo da Toxicologia A Organização Mundial de Saúde OMS estima que ocorrem 5 milhões de acidentes por picada de serpente por ano resultando em 2,5 milhões de envenenamentos e em pelo menos 100 000 mortes Portanto tanto as intoxicações exógenas como os envenenamentos por animais peçonhentos correspondem a relevantes situações de risco de saúde que requerem atendimento especializado constituindo um sério problema sanitário mundial De modo agudo as intoxicações e envenenamentos ocorrem em diversos contextos como intenção suicida acidentes abuso de

substâncias prescritas em dicas equivocadas dentre outros. Por fim, também a exposição crítica a substâncias com potencial tóxico pode desencadear consequências deletérias ao organismo a longo prazo, a exemplo da mutagenese e da carcinogênese. **Terapia intensiva: um elo entre preparo técnico, físico e emocional** Bárbara Queiroz de Figueiredo, Júlia Fernandes Nogueira, Ana Paula Ferreira Araújo, Talita Marques da Silva, Alanna Simão Gomes, 2022-05-15. Uma unidade de tratamento intensivo (UTI) ou unidade de cuidados intensivos (UCI) é uma estrutura hospitalar que se caracteriza como unidade complexa, dotada de sistema de monitorização contínua que admite pacientes potencialmente graves ou com descompensação de um ou mais sistemas orgânicos e que, com o suporte e tratamento intensivos, tenham possibilidade de se recuperar. A configuração física da UTI deve abranger monitorização multiparamétrica, suporte de ventiladores artificiais, cama especial com controle elétrico, almofada de aparelhos utilizados em doenças graves por especialidade, entre outros tipos de aparelhagem. A equipe da UTI conta com médicos intensivistas, médicos assistentes, plantonistas com treinamento em medicina intensiva, almofada de enfermeiros, fisioterapeutas, farmacêuticos, clínicos, fonoaudiólogos e equipe de suporte nutricional especializados em doenças graves e treinamento em ambientes de alta complexidade. Quando se trata do atendimento em uma Unidade de Terapia Intensiva, a preocupação no contexto de evolução médica e hospitalar se intensifica, tendo em vista que este setor hospitalar promove o cuidado a pacientes de alta complexidade e qualquer intervenção inadequada pode representar uma piora de quadro ou mesmo um óbito.
