DOC-316.53.01302

0.05 to 4.00 mg/L as Cl<sub>2</sub>

Scope and application: Drinking water.

## Test preparation

### Introduction

Use the test procedures that follow with the USEPA Method 334.0, *Determination of Residual Chlorine in Drinking Water using an On-line Chlorine Analyzer*. The test procedures in this document are for use by drinking water facilities for compliance with daily monitoring requirements. The applicable section of the USEPA method is referred to in each test procedure.

#### USEPA Method 334.0 summary:

An online chlorine analyzer is used to continuously monitor the chlorine concentration at a sample point of drinking water. The instrument is calibrated with aqueous standards or the results from two grab samples collected at the same sample point and time. The grab samples are analyzed for chlorine (free or total) with a method that is approved for compliance monitoring of drinking water. The online analyzer accuracy is verified and/or adjusted at regular intervals with the results from grab sample analyses.

### Before starting

- Fully read the procedures. Identify the reagents and reagent quantities necessary for the procedures. Identify the correct cleaning procedures for labware.
- Read the instructions and precautions in the procedures to get the precision and accuracy requirements of Method 334.0.
- Identify if free chlorine or total chlorine will be measured.
- Read the instrument-specific procedures for chlorine determination (Method 10245, DPD Free Chlorine, or Method 10250, DPD Total Chlorine) for more test instructions.
- Use dedicated labware and reagents to decrease preparation and analysis time and to prevent analysis errors.
- Identify if there are more test requirements added by the primacy agency.
