Realism and Psychological Science David J. F. Maree,2020-06-02 The book provides an argument why realism is a viable metatheoretical framework for psychological science By looking at some variations of realism such as scientific realism critical realism situational realism and Ferraris new realism a realist view of science is outlined that can feature as a metatheory for psychological science Realism is a necessary correction for the mythical image of science responsible for and maintained by a number of dichotomies and polarities in psychology Thus the quantitative qualitative dichotomy scientist practitioner polarity and positivist constructionist opposition feed off and maintains a mythic image of science on levels of practice methods and metatheory Realism makes a clear distinction between ontology and epistemic access to reality the latter which easily fits with softer versions of constructionism and the former which grounds science in resistance and possibility loosely translated as criticism By taking science as a critical activity an issue such as the quantitative imperative loses its defining force as a hallmark of

science it provides epistemic access to certain parts of reality In addition essentially critical activities characteristic of various qualitative approaches may be welcomed as proper science Academics professionals and researchers in psychology would find value in situating their scholarly work in a realist metatheory avoiding the pitfalls of traditional methodologies and theories *Übergang vom Studium ins Berufsleben - Beratung und Recruiting* Michael Scharpf, Bernd-Joachim

Child and Adolescent Therapy Jeremy P. Shapiro,2025-02-11 The most comprehensive textbook on the theory research and practice of child and adolescent therapy *Child and Adolescent Therapy Science and Art* is a unique textbook that introduces readers to all the major theoretical orientations CBT family systems etc and applies them to the common diagnostic categories anxiety disruptive behavior etc Rather than championing one therapeutic approach above the others it identifies the strengths and applicability of each with an emphasis on matching strategies to client needs and preferences

The central theme is the integration of outcome research and clinical reasoning to choose techniques and personalize counseling for each client. The vast literature on therapy outcomes is distilled into user friendly summaries with clear conclusions and implications for treatment planning. The book models the thought processes of expert clinicians as they integrate theoretical principles, research findings and observations of clients in real time to conceptualize cases, make clinical decisions and decide what to say next. Theoretical concepts, empirically supported treatments and best practices are translated into numerous examples of therapist statements and conversations between counselor and client. Unlike edited books with chapters by different authors, this work is an integrated whole with connections between chapters, a building block approach to learning and unifying themes developed throughout the book. The Third Edition has been thoroughly updated to reflect current research and clinical advances. It features new material on The Internal Family Systems therapeutic model, Modular psychotherapies, Transdiagnostic approaches, Head to head comparisons between empirically supported therapies. This textbook offers a thorough and practical introduction for graduate students in psychology, counseling and social work. It also serves as a valuable resource for practicing mental health professionals who want to fill gaps in their knowledge, catch up with the outcome research and learn new techniques. Purchasers get access to a companion website where they can download therapy handouts; instructors can also download teaching materials such as questions for discussion and exam questions.
