

The background of the cover is a vibrant blue sky with scattered white clouds. A bright, glowing light source, likely the sun, is positioned on the left side, creating a strong lens flare effect that streaks across the sky. A dark-colored fighter jet is shown in profile, flying from left to right across the center of the image. The jet's wings are swept back, and it appears to be in a high-speed maneuver.

General Aviation Aircraft Design Snorri Gudmundsson, 2021-10-31 General Aviation Aircraft Design Second Edition continues to be the engineer's best source for answers to realistic aircraft design questions. The book has been expanded to provide design guidance for additional classes of aircraft including seaplanes, biplanes, UAS, high speed business jets, and electric airplanes. In addition to conventional powerplants, design guidance for battery systems, electric motors, and complete electric powertrains is offered. The second edition contains new chapters: Thrust Modeling for Gas Turbines, Longitudinal Stability and Control, Lateral and Directional Stability and Control. These new chapters offer multiple practical methods to simplify the estimation of stability derivatives and introduce hinge moments and basic control system design. Furthermore, all chapters have been reorganized and feature updated material with additional analysis methods. This edition also provides an introduction to design optimization using a wing optimization as an example for the beginner. Written by an engineer with more than 25 years of design experience, professional engineers, aircraft designers, aerodynamicists, structural analysts, performance analysts, researchers, and aerospace engineering students will value the book as the classic go-to for aircraft design. The printed book is now in color with 1011 figures and illustrations. Presents the most common methods for conceptual aircraft design. Clear presentation splits text into shaded regions separating engineering topics from mathematical derivations and examples. Design topics range from the new 14 CFR Part 23 to analysis of ducted fans. All chapters feature updated material with additional analysis methods. Many chapters have been reorganized for further help. Introduction to design optimization is provided using a wing optimization as an example for the beginner. Three new chapters are offered, two of which focus on stability and control. These offer multiple practical methods to simplify the estimation of stability derivatives. The chapters introduce hinge moments and basic control system design. Real world examples using aircraft such as the Cirrus SR 22 and Learjet 45.
