Human Movement and Motor Control in the Natural Environment Peter A Federolf, Maurice Mohr, Thorsten Stein, Gert-Jan Pepping, Steven van Andel, Gillian Weir, 2023-06-08 The basic understanding of human movement and control of human movement stems largely from laboratory measurements where human movement can be quantified with high precision and accuracy but where the artificial environment compromises ecological validity A good example for this issue was demonstrated in a recent investigation specifically that the walking gait pattern of healthy individuals in a laboratory changed as a function of how many researchers were present during the experiment Observations like these underscore that study volunteers adapt their behavior to the specific laboratory environment and warrant the question of how well we can transfer our lab based understanding of gait patterns and the underlying neuromuscular control system to walking during daily living Another research area where lab based movement assessments have led to conflicting findings is the field of sports injury prevention Many neuromuscular training programs have been shown to be effective in reducing the sport injury rate in athletes by 30 50% or more in a variety of different multi directional sports Nevertheless lab based assessments of the same athletes who completed those training programs were often not able to detect improvements in motor control of sport specific movements or a reduction in joint loading two factors thought to be closely linked with sport injury risk This disconnect suggests that lab based assessments of movement and motor control are often poor indicators of player behavior during real game scenarios and may limit our ability to screen athletes for injury risk or monitor their progress in rehabilitation These examples highlight that we should strive for the assessment and investigation of human movement and motor control in natural environments i e where individuals patients athletes or other groups of interest perform explore and interact under real world conditions

N. Bieńkiewicz,Cathy

Craig,2017-01-05 Recent years have brought new insights to the understanding of Parkinson s disease impact of exercise and sound displays in rehabilitation and movement facilitation There is growing evidence that auditory signals in the environment can provide a temporal template for movement and change the mode of motor control from intrinsic to extrinsic habitual to goal directed enabling enhanced motor performance in patients In addition forced exercise rate studies show that exercising at the pace of healthy adults can have potential neuroprotective benefits for patients Many research groups have explored the use of auditory cues such as rhythmical auditory training in improving gait and upper limb movement parameters Cues

are usually either intermittent metronome or continuous dynamic sound displays Similarly dance based interventions suggest that patients benefit from additional sensory information i e the temporal structure embedded in music and proprioceptive information from a dancing partner that facilitates movement On the contrary studies dedicated to auditory perception and motor timing report an impaired ability of patients to perceive and synchronise with complex rhythmical structures i e causing an inability to play musical instruments With the growth of modern technology and the increasing portability of hi specification devices such as smart phones new research questions on the design of interventions are beginning to emerge as we strive for more efficient therapeutic approaches In this Research Topic we wanted to bring together top scientists from the movement disorder motor control and sound related studies along with therapists That way we can engage in cross disciplinary and challenging scientific debate about future rehabilitation avenues and frontiers for Parkinson s disease patients

patient's entire course of treatment from pre to post surgery. For each phase of rehabilitation, this book describes the postoperative timeline, the goals, potential complications, and precautions, and appropriate therapeutic procedures. New to this edition are a full color design and new chapters on disc replacement, cartilage replacement, hallux valgus, and transitioning the running athlete. Edited by Lisa Maxey and Jim Magnusson and with chapters written by both surgeons and physical therapists, *Rehabilitation for the Postsurgical Orthopedic Patient* provides valuable insights into the use of physical therapy in the rehabilitation process. Comprehensive evidence-based coverage provides an overview of the orthopedic patient's entire course of treatment from pre to post surgery, including a detailed look at the surgical procedures and therapy guidelines that can be used to design the appropriate rehabilitation programs. Case study vignettes with critical thinking questions help you develop critical reasoning skills. Indications and considerations for surgery describe the mechanics of the injury and the repair process so you can plan an effective rehabilitation program. Therapy guidelines cover each phase of rehabilitation with specifics as to the expected time span and goals for each phase. Evidence-based coverage includes the latest clinical research to support treatment decisions. Overview of soft tissue and bone healing considerations after surgery helps you understand the rationale behind the timelines for the various physical therapy guidelines. A Troubleshooting section in each chapter details potential pitfalls in the recovery from each procedure. Over 300 photos and line drawings depict concepts, procedures, and rehabilitation. Detailed tables break down therapy guidelines and treatment options for quick reference. Expert contributors include surgeons describing the indications and considerations for surgery as well as the surgery itself and physical or occupational therapists discussing therapy guidelines. New coverage of current orthopedic surgeries and rehabilitation includes topics such as disc replacement, cartilage replacement, hallux valgus, and transitioning the running athlete. New full color design and illustrations visually reinforce the content. Updated Suggested Home Maintenance boxes in every chapter provide guidance for patients returning home. References linked to MEDLINE abstracts make it easy to access evidence-based information for better clinical decision making.

Locomotion and Posture in Older Adults Fabio

Augusto Barbieri, Rodrigo Vitório, Paulo Cezar Rocha dos Santos, 2025-02-19. This book sheds new light on the effects of aging and movement disorders on movement control during walking and postural tasks. Understanding these dynamics is more important than ever as we face a future where the number of older adults is projected to double by 2050. The severity of this framework is exacerbated when aging is accompanied by movement disorders such as Parkinson's disease, Chorea, Multiple Sclerosis, Dystonia, and Huntington's disease. The book explores how complex interactions between musculoskeletal and neural systems are required for efficient execution of daily activities like walking and maintaining posture. The chapters in this comprehensive volume address the multifaceted challenges posed by aging and movement disorders in gait and postural control, including innovative rehabilitation strategies and the role of artificial intelligence. Expert contributors examine how environmental, sensorial, motor, cognitive, and individual factors influence locomotor and postural activities. Readers will

discover cutting edge research findings that address critical questions about planning performance and impairment in these essential functions This book is a must read for anyone seeking to understand and reduce the effects of aging and movement disorders on gait and posture This book is an invaluable resource for clinicians physical therapists occupational therapists psychologists biologists researchers health professionals as well as those involved in physical education and sports medicine It highlights the mechanisms involved in controlling and planning postural and gait tasks in both neurologically healthy older individuals and those who suffer from movement disorders offering new perspectives on interventions and technologies designed to improve understanding or delay impairments due to aging or movement disorders on gait and posture Whether you re a practitioner or researcher in related fields this book equips you with the essential knowledge to enhance the quality of life for older adults facing these challenges
