

The limits of size are separately evaluated and must meet the size requirements.

When using the surface method, the sides of the slot may be in any condition provided the limits of size are met and the sides of the slot do not violate the virtual condition boundary. For a slot, the virtual condition is equal to the MMC minus the position tolerance. In the first example shown in Figure 8-37, the virtual condition boundary is .724".

When using the axis (center plane) method, the tolerance zone for the slot center plane is a rectangular zone .016" wide when the feature is at MMC. The tolerance zone is centered on datum plane A. The tolerance zone is equal in height to the slot and extends the full length of the slot. The center plane of the slot is the center plane of the unrelated actual mating envelope of the slot. The center plane must fall inside the tolerance zone. The tolerance zone is .016" wide when the unrelated actual mating envelope departs from MMC, additional tolerance equal to the departure from MMC is applicable.

Position Tolerance at RFS on a Slot

When a position tolerance is applied RFS on a slot, the allowable tolerance is not affected by the size of the tolerated feature. See Figure 8-38. When a position tolerance is applicable at RFS, only the axis method of verification may be used. In the given

Figure 8-38. A position tolerance applied at RFS to a width feature of size creates a rectangular tolerance zone that controls the feature's center plane location.

example, the tolerance zone has a fixed width of .016". The center plane of the slot must be within the tolerance zone. The center plane of the slot is defined as the center plane of the unrelated actual mating envelope.

Bounded Feature

A position tolerance may be applied to a bounded feature that has a profile tolerance applied to it. The profile tolerance establishes a maximum material boundary, and the position tolerance is used to define the allowable location variation for the maximum material boundary. See Figure 8-39. Profile tolerances are explained in another chapter.

The position tolerance value shown in the feature control frame is a total width tolerance. The .010" position tolerance creates a virtual condition boundary that is .010" smaller than the distance across the boundary created by the profile tolerance.

Figure 8-39. A position tolerance may be applied to define the position requirement of a bounded feature when a profile tolerance creates an inner and outer boundary.

A Framework to Guide Selection of Chemical Alternatives National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Board on Chemical Sciences and Technology, Committee on the Design and Evaluation of Safer Chemical Substitutions: A Framework to Inform Government and Industry Decisions, 2014-10-29 Historically regulations governing chemical use have often focused on widely used chemicals and acute human health effects of exposure to them as well as their potential to cause cancer and other adverse health effects As scientific knowledge has expanded there has been an increased awareness of the mechanisms through which chemicals may exert harmful effects on human health as well as their effects on other species and ecosystems Identification of high priority chemicals and other chemicals of concern has prompted a growing number of state and local governments as well as major companies to take steps beyond existing hazardous chemical federal legislation Interest in approaches and policies that ensure that any new substances substituted for chemicals of concern are assessed as carefully and thoroughly as possible has also burgeoned The overarching goal of these approaches is to avoid regrettable substitutions which occur when a toxic chemical is replaced by another chemical that later proved unsuitable because of persistence bioaccumulation toxicity or other concerns Chemical alternative assessments are tools designed to facilitate consideration of these factors to assist stakeholders in identifying chemicals that may have the greatest likelihood of harm to human and ecological health and to provide guidance on how the industry may develop and adopt safer alternatives A Framework to Guide Selection of Chemical Alternatives develops and demonstrates a decision framework for evaluating potentially safer substitute chemicals as primarily determined by human health and ecological risks This new framework is informed by previous efforts by regulatory agencies academic institutions and others to develop alternative assessment frameworks that could be operationalized In addition to hazard assessments the framework incorporates steps for life cycle thinking which considers possible impacts of a chemical at all stages including production use and disposal as well as steps for performance and economic assessments The report also highlights how modern information sources such as computational modeling can supplement traditional toxicology data in the assessment process This new framework allows the evaluation of the full range of benefits and shortcomings of substitutes and examination of tradeoffs between these risks and factors such as product functionality product efficacy process safety and resource use Through case studies this report demonstrates how different users in contrasting decision contexts with diverse

priorities can apply the framework This report will be an essential resource to the chemical industry environmentalists ecologists and state and local governments

Entwicklungsforschung "Proof," Policy, and Practice Paul E. Lingenfelter, 2023-07-03 How can we fix our schools Improve graduation rates in college What works These are questions that make the headlines and vex policy makers practitioners and educational researchers While they strive to improve society there are frequently gulfs of mutual incomprehension among them Academics longing for more influence may wrongly fault irrationality ideology or ignorance for the failure of research to inform policy and practice more powerfully Policy makers and practitioners may doubt that academics can deliver ideas that will reliably yield desirable results This book bridges the divide It argues that unrealistic expectations lead to both unproductive research and impossible standards for evidence based policy and practice and it offers promising ways for evidence to contribute to improvement It analyzes the utility and limitations of the different research methods that have been applied to policy and practice as well as the strengths and weaknesses of educational reform strategies It explains why using evidence for accountability often makes things worse rather than better Paul Lingenfelter offers educational researchers and policy makers a framework for considering such questions as What problems are important and accessible What methods will be fruitful Which help policy makers and practitioners make choices and learn how to improve What information is relevant What knowledge is valid and useful How can policy makers and practitioners establish a more productive division of labor based on their respective capabilities and limitations He cautions against the illusion that straight forward scientific approaches and data can be successfully applied to society s most complex problems While explaining why no single policy or intervention can solve complex problems he concludes that determination measurement analysis and adaptation based on evidence in specific situations can lead to significant improvement This positive even handed introduction to the use of research for problem solving concludes by suggesting emerging practices and approaches that can help scholars practitioners and policy leaders become more successful in reaching their fundamental goals The Oxford Handbook of Community Music Brydie-Leigh Bartleet, Lee Higgins, 2018-02-01 Community music as a field of practice pedagogy and research has come of age The past decade has witnessed an exponential growth in practices courses programs and research in communities and classrooms and within the organizations dedicated to the subject The Oxford Handbook of Community Music gives an authoritative and comprehensive review of what has been achieved in the field to date and what might be expected in the future This Handbook addresses community music through five focused lenses contexts transformations politics intersections and education It not only captures the vibrant dynamic and divergent approaches that now characterize the field but also charts the new and emerging contexts practices pedagogies and research approaches that will define it in the coming decades The contributors to this Handbook outline community music s common values that center on social
