**Foundations of Modern Networking** William Stallings, Florence Agboma, Sofiene Jelassi, 2016      **Foundations of Modern Networking** William Stallings, 2015-10-27 Foundations of Modern Networking is a comprehensive unified survey of modern networking technology and applications for today's professionals, managers and students. Dr. William Stallings offers clear and well-organized coverage of five key technologies that are transforming networks: Software Defined Networks (SDN), Network Functions Virtualization (NFV), Quality of Experience (QoE), the Internet of Things (IoT), and cloud-based services. Dr. Stallings reviews current network ecosystems and the challenges they face from Big Data and mobility to security and complexity. Next, he offers complete self-contained coverage of each new set of technologies: how they work, how they are architected, and how they can be applied to solve real problems. Dr. Stallings presents a chapter-length analysis of emerging security issues in modern networks. He concludes with an up-to-date discussion of networking careers, including important recent changes in roles and skill requirements. Coverage includes: Elements of the modern networking ecosystem; technologies, architecture, services, and applications; Evolving requirements of current network environments; SDN concepts, rationale, applications, and standards across data, control, and application planes; OpenFlow, OpenDaylight, and other key SDN technologies; Network functions virtualization concepts, technology, applications, and software-defined infrastructure; Ensuring customer Quality of Experience (QoE) with interactive video and multimedia network traffic; Cloud networking services, deployment models, architecture, and linkages to SDN and NFV; IoT and fog computing in depth; key components of IoT-enabled devices; model architectures and example implementations; Securing SDN, NFV, cloud, and IoT environments; Career preparation and ongoing education for tomorrow's networking careers. SDN and NFV technologies, when combined, simplify the deployment of network resources, lower capital and operating expenses, and offer greater network flexibility. The increasing usage of NFV is one of the primary factors that make SDN adoption attractive. The integration of these two technologies, SDN and NFV, offer a complementary service with NFV delivering many of the real services controlled in an SDN. While SDN is focused on the control plane, NFV optimizes the actual network services that manage the data flows. Devices such as routers, firewalls, and VPN terminators are replaced with virtual devices that run on commodity hardware in NFV physical networking. This resembles the as-a-service typical model of cloud services in many aspects. These virtual devices can be accessed on demand.

by communication network or data center providers This book illustrates the fundamentals and evolution of SDN and NFV and highlights how these two technologies can be integrated to solve traditional networking problems In addition it will focus on the utilization of SDN and NFV to enhance network security which will open ways to integrate them with current technologies such as IoT edge computing and blockchain SDN based network programmability and current network orchestration technologies The basics of SDN and NFV and associated issues challenges technological advancements along with advantages and risks of shifting networking paradigm towards SDN are also discussed Detailed exercises within the book and corresponding solutions are available online as accompanying supplementary material Cloud and Edge Networking Kamel Haddadou, Guy Pujolle, 2024-01-04 A major transformation in the world of networks is underway as the focus shifts from physical technology to software based solutions In this book the authors present this new generation of networks that are based in the Cloud by detailing the transition from a complex environment to a simple digital infrastructure This infrastructure brings together connected devices the antennas that collect radio waves the optical fibers that carry signals and the data center that handles all of the different processes From this perspective the data center becomes the brain managing network services controls automation intelligence security and other applications This architecture is relevant to carrier networks the Internet of Things enterprise networks and the global networks of the major Internet companies Cloud and Edge Networking further discusses developments at the border of networks the Edge where data is processed as near as possible to the source Over the next ten years the Edge will become a major strategic factor
