Pilcher, 2012-10-16 Food matters not only as a subject of study in its own right but also as a medium for conveying critical messages about capitalism the environment and social inequality to diverse audiences Recent scholarship on the subject draws from both a pathbreaking body of secondary literature and an inexhaustible wealth of primary sources from ancient Chinese philosophical tracts to McDonald s menus contributing new perspectives to the historical study of food culture and society and challenging the limits of history itself The Oxford Handbook of Food History places existing works in historiographical context crossing disciplinary chronological and geographic boundaries while also suggesting new routes for future research The twenty seven essays in this book are organized into five sections historiography disciplinary approaches production circulation and consumption of food The first two sections examine the foundations of food history not only in relation to key developments in the discipline of history itself such as the French Annales school and the cultural turn but also in anthropology sociology geography pedagogy and the emerging Critical Nutrition Studies The following three sections sketch various trajectories of food as it travels from farm to table factory to eatery nature to society Each section balances material cultural and intellectual concerns whether juxtaposing questions of agriculture and the environment with the notion of cookbooks as historical documents early human migrations with modern culinary tourism or religious customs with social activism In its vast interdisciplinary scope this handbook brings students and scholars an authoritative guide to a field with

this tell us about the place of empire in French society In *Colonial Food in Interwar Paris* Lauren Janes disputes the claim that empire was central to French history and identity arguing that the distrust of colonial food reflected a wider disinterest in the empire From Indochinese rice to North African grains and tropical fruit to curry powder this book offers an intriguing and original challenge to current orthodoxy about the centrality of empire to modern France by examining the place of colonial foods in the nation's capital

**Biological Economies** Richard Le Heron, Hugh Campbell, Nick Lewis, Michael Carolan, 2016-01-22 Recent agri food studies including commodity systems the political economy of agriculture regional development and wider examinations of the rural dimension in economic geography and rural sociology have been confronted by three challenges These can be summarized as more than human approaches to economic life a post structural political economy of food and agriculture and calls for more enactive performative research approaches This volume describes the genealogy of such approaches drawing on the reflective insights of more than five years of international engagement and research It demonstrates the kinds of new work being generated under these approaches and provides a means for exploring how they should be all understood as part of the same broader need to review theory and methods in the study of food agriculture rural development and economic geography This radical collective approach is elaborated as the Biological Economies approach The authors break out from traditional categories of analysis reconceptualising materialities and reframing economic assemblages as biological economies based on the notion of all research being enactive or performative

**After Ice** Rafico Ruiz, Paula Schönach, Rob Shields, 2024-11-01 As the climate warms and the hydrological cycle falters ice is no longer a reliable feature of higher latitudes or winter seasons What are the consequences of the planet's waning capacity to cool In other words what comes after ice This collection examines the implications of the end of consistent freezing and thawing cycles After Ice gathers experts in a wide range of disciplines to articulate aspects of the cold humanities They investigate ice and its dynamic properties as a foundational element of Indigenous communities in the Arctic regions as a commodity with technological and political value and as a reflection of environmental change and the passage of time As the future of the cryosphere is increasingly determined by human behaviour this thought provoking exploration envisions ice as both a phase of water and as a milieu for sensemaking It asks us to consider how to define describe and materially characterize our warming world

The Problem with Feeding Cities Andrew Deener, 2020-10-10 For most people grocery shopping is a mundane activity Few stop to think about the massive global infrastructure that makes it possible to buy Chilean grapes in a Philadelphia supermarket in the middle of winter Yet every piece of food represents an interlocking system of agriculture manufacturing shipping logistics retailing and nonprofits that controls what we eat or don't The Problem with Feeding Cities is a sociological and historical examination of how this remarkable network of abundance and convenience came into being over the last century It looks at how the US food system transformed from feeding communities to feeding the entire nation and it reveals how a process that was once about fulfilling basic needs became focused on satisfying profit margins It is also a story of how this system fails to feed people especially in the creation of food deserts Andrew Deener shows that problems with food access are the result of infrastructural failings stemming from how markets and cities were developed how distribution systems were built and how organizations coordinate the quality and movement of food He profiles hundreds of people connected through the food chain from farmers wholesalers and supermarket executives to global shippers logistics experts and cold storage operators to food bank employees and public health advocates It is a book that will change the way we see our grocery store trips and will encourage us all to rethink the way we eat in this country

*Life on Ice* Joanna Radin, 2017-03-27 After the atomic bombing at the end of World War II anxieties about survival in the nuclear age led scientists to begin stockpiling and freezing

hundreds of thousands of blood samples from indigenous communities around the world. These samples were believed to embody potentially invaluable biological information about genetic ancestry, evolution, microbes, and much more. Today they persist in freezers as part of a global tissue-based infrastructure. In *Life on Ice*, Joanna Radin examines how and why these frozen blood samples shaped the practice known as biobanking. The Cold War projects Radin tracks were meant to form an enduring total archive of indigenous blood before it was altered by the polluting forces of modernity. Freezing allowed that blood to act as a time-traveling resource. Radin explores the unique cultural and technical circumstances that created and gave momentum to the phenomenon of life on ice and shows how these preserved blood samples served as the building blocks for biomedicine at the dawn of the genomic age. In an era of vigorous ethical, legal, and cultural debates about genetic privacy and identity, *Life on Ice* reveals the larger picture: how we got here and the promises and problems involved with finding new uses for cold human blood samples.

**Food and Aviation in the Twentieth Century** Bryce Evans, 2020-12-10  
Established by New York stockbroker Juan Trippe in 1927, the story of Pan Am is the story of US-led globalisation and imperial expansion in the twentieth century, with the airline achieving the vast majority of firsts in aviation history: pioneering transoceanic travel and new technologies and all but creating the glitzy style and ambience eulogised in Frank Sinatra's *Come Fly with Me*. Bryce Evans investigates an aspect of the airline service that was central to the company's success: its food, a gourmet glamour underpinned by both serious science and attention to the detail of fine dining culture. Modelled on the elite dining experience of the great ocean liners, the first transatlantic and transpacific flights featured formal thirteen-course dinners served in art deco cabins and served by waiters in white waist-length jackets and garrison hats. As flight times got faster and altitudes higher, Pan Am pioneered the design of hot food galleys and commissioned research into how altitude and pressure affected taste buds, amending menus accordingly. A tale of collaboration with chefs from the best Parisian restaurants and the wining and dining of politicians and film stars, the book also documents what food service was like for flight attendants, exploring how the golden age of airline dining was underpinned by a racist and sexist culture. Written accessibly and with an eye for the glamour and razzamatazz of public aviation history, Bryce Evans' research into Pan Am airways will be valuable for scholars of food studies and aviation, consumer tourism, transport, and 20th-century American history.

Tea has been one of the most popular commodities in the world Over centuries profits from its growth and sales funded wars and fueled colonization and its cultivation brought about massive changes in land use labor systems market practices and social hierarchies the effects of which are with us even today A Thirst for Empire takes a vast and in depth historical look at how men and women through the tea industry in Europe Asia North America and Africa transformed global tastes and habits and in the process created our modern consumer society As Erika Rappaport shows between the seventeenth and twentieth centuries the boundaries of the tea industry and the British Empire overlapped but were never identical and she highlights the economic political and cultural forces that enabled the British Empire to dominate but never entirely control the worldwide production trade and consumption of tea Rappaport delves into how Europeans adopted appropriated and altered Chinese tea culture to build a widespread demand for tea in Britain and other global markets and a plantation based economy in South Asia and Africa Tea was among the earliest colonial industries in which merchants planters promoters and retailers used imperial resources to pay for global advertising and political lobbying The commercial model that tea inspired still exists and is vital for understanding how politics and publicity influence the international economy Jacket **Making**

**Seafood Sustainable** Mansel G. Blackford,2011-12-30 In the spring of 2007 National Geographic warned The oceans are in deep blue trouble From the northernmost reaches of the Greenland Sea to the swirl of the Antarctic Circle we are gutting our seas of fish There were legitimate grounds for concern After increasing more than fourfold between 1950 and 1994 the global wild fish catch reached a plateau and stagnated despite exponential growth in the fishing industry As numerous scientific reports showed many fish stocks around the world collapsed creating a genuine global overfishing crisis Making Seafood Sustainable analyzes the ramifications of overfishing for the United States by investigating how fishers seafood

processors retailers government officials and others have worked together to respond to the crisis Historian Mansel G Blackford examines how these players took steps to make fishing in some American waters especially in Alaskan waters sustainable Critical to these efforts Blackford argues has been government and industry collaboration in formulating and enforcing regulations What can be learned from these successful experiences Are they applicable elsewhere What are the drawbacks Making Seafood Sustainable addresses these questions and suggests that sustainable seafood management can be made to work The economic and social costs incurred in achieving sustainable resource usage are significant but there are ways to mitigate them More broadly this study illustrates ways to manage commonly held natural resources around the world land water oil and so on in sustainable ways
