Spatial Database Systems Albert K.W. Yeung,G. Brent Hall,2007-05-23 The decision to write this book was motivated by a number of factors First although several useful textbooks on spatial databases have recently been published this is an area of spatial information science that has lagged somewhat behind the rapid advances of the technology and the profusion of books on domain specific applications Second much of the information pertaining to spatial database technologies is only available in scattered journal papers and conference proceedings and prior to this book no single effort has been made to sift through this expansive literature and unite the key contributions in a single volume The tasks of sourcing and coherently integrating relevant contributions is daunting for students many of whom have a substantial number of competing demands placed on them This book should make the task of knowledge building less daunting Third and perhaps most importantly an apparent trend in many spatial information science programs is to focus from first or second year undergraduate through to fourth year courses on learning to work confidently and independently with increasingly complex software tools Hence many courses are technical in nature and while they continue to produce technically adept students knowledge of the broader aspects of spatial databases is often not as complete as it might be among graduates Some programs have sought to address this by introducing courses that focus on spatial data management However these courses are largely unsupported by a relevant and contemporary textbook

are serving as the foundation for the transition of enterprises away from this restrictive model. We describe techniques that allow analytical and transactional processing at the speed of thought and enable new ways of doing business. The book is intended for university students, IT professionals and IT managers but also for senior management who wish to create new business processes by leveraging in-memory computing.

Conceptual Modeling - ER 2004 Paolo Atzeni, Wesley Chu, Hongjun Lu, Shuigeng Zhou, Tok Wang Ling, 2005-01-17. On behalf of the Organizing Committee we would like to welcome you to the proceedings of the 23rd International Conference on Conceptual Modeling, ER 2004. This conference provided an international forum for technical discussion on conceptual modeling of information systems among researchers, developers and users. This was the third time that this conference was held in Asia; the first time was in Singapore in 1998 and the second time was in Yokohama, Japan in 2001. China is the third largest nation with the largest population in the world. Shanghai, the largest city in China and a great metropolis famous in Asia and throughout the world, is therefore a most appropriate location to host this conference. This volume contains papers selected for presentation and includes the two keynote talks by Prof. Hector Garcia Molina and Prof. Gerhard Weikum and an invited talk by Dr. Xiao Ji. This volume also contains industrial papers and demo poster papers. An additional volume contains papers from 6 workshops. The conference also featured three tutorials: 1. Web Change Management and Delta Mining Opportunities and Solutions by Sanjay Madria; 2. A Survey of Data Quality Issues in Cooperative Information Systems by Carlo Batini; and 3. Visual SQL: An ER Based Introduction to Database Programming by Bernhard Thalheim.

Integrated Formal Methods Judi M.T. Romijn, Graeme P. Smith, Jaco C. van de Pol, 2005-10-27. With a broadened scope, more emphasis on applied computing and more than 70 chapters.
