Pimentel, 2008-08-04 The petroleum age began about 150 years ago Easily available energy has supported major advances in agriculture industry transportation and indeed many diverse activities valued by humans Now world petroleum and natural gas supplies have peaked and their supplies will slowly decline over the next 40 50 years until depleted Although small amounts of petroleum and natural gas will remain underground it will be energetically and economically impossible to extract In the United States coal supplies could be available for as long as 40 50 years depending on how rapidly coal is utilized as a replacement for petroleum and natural gas Having been comfortable with the security provided by fossil energy especially petroleum and natural gas we appear to be slow to recognize the energy crisis in the U S and world Serious energy conservation and research on viable renewable energy technologies are needed Several renewable energy technologies already exist but sound research is needed to improve their effectiveness and economics Most of the renewable energy technologies are influenced by geographic location and face problems of intermittent energy supply and storage Most renewable technologies require extensive land a few researchers have even suggested that one half of all land biomass could be harvested in order to supply the U S with 30% of its liquid fuel Some optimistic investigations of renewable energy have failed to recognize that only 0.1% of the solar energy is captured annually in the U S **Catalog of Copyright Entries. Spectroscopic Methods in Food Analysis Adriana S. Franca, Leo M.L. Nollet, 2017-12-14 Given the inherent complexity of food products most instrumental techniques employed for quality and authenticity evaluation e g chromatographic methods are time demanding expensive and involve a considerable amount of manual labor Therefore there has been an increasing interest in simpler faster and reliable analytical methods for assessing food quality attributes Spectroscopic Methods in Food Analysis presents the basic concepts of spectroscopic methods together with a discussion on the most important applications in food analysis The determination of product quality and authenticity and the detection of adulteration are major issues in the food industry causing concern among consumers and special attention among food manufacturers As such this book explains why spectroscopic methods have been extensively employed to the analysis of food products as they often require minimal or no sample preparation provide rapid and on line analysis and have the potential to run multiple tests on a single sample i e non destructive This book consists of concepts related to food quality and authenticity that are quite broad given the different demands of the manufacturer the consumer the surveillance and the legislative bodies that ultimately provide healthy and safe products
