**Original Selfishness** Daryl P. Domning, Monika K. Hellwig, 2016-12-05 This book defends a startling idea that the age old theological and philosophical problems of original sin and evil long thought intractable have already been solved The solution has come from the very scientific discovery that many consider the most mortal threat to traditional religion evolution Daryl P Domning explains in straightforward terms the workings of modern evolutionary theory Darwinian natural selection and how this has brought forth life and the human mind He counters objections to Darwinism that are raised by some believers and emphasizes that the evolutionary process necessarily enforces selfish behavior on all living things This account of both physical and moral evil is arguably more consistent with traditional Christian teachings than are the explanations given by most contemporary evolutionary theologians themselves The prominent theologian Monika K Hellwig dialogues with Daryl Domning throughout the book to present a balanced reappraisal of the doctrine of original sin from both a scientist's and theologian's perspective

**Playful identities** Valerie Frissen, Joost Raessens, Jos de Mul, Sybille Lammes, Michiel de Lange, 2015-02-18 In this edited volume eighteen scholars examine the increasing role of digital media technologies in identity construction through play Going beyond computer games this interdisciplinary collection argues that present day play and games are not only appropriate metaphors for capturing postmodern human identities but are in fact the means by which people create their identity From discussions of World of Warcraft and Foursquare to digital cartographies the combined essays form a groundbreaking volume that features the most recent insights in play and game studies media research and identity studies

**Complex Systems** Rob Stocker, Herbert Jelinek, Bohdan Durnota, 1996 Over the past few years the study of Complex Systems has proven to be a fruitful and expanding field of research Just as the number of discoveries and applications has grown so has level of acceptance in academic government and commercial environments Theoretical and practical contributions to research have continued to provide a springboard for wide ranging discoveries across many disciplines investigating complex phenomena This is the third in a series of collected studies on

complexity research This volume addresses one of the central issues of complexity That is how are systems put together How do interactions between individual elements build up into the behavior or properties of an entire system The topics are Organization and Behavior of Computational Systems Criticality and Complexity Nonlinear Dynamics and Fractals Computational Problem Solving with Genetic Algorithms and Cellular Automata Evolution Learning and Artificial Neural Networks From Biological Systems to Artificial Life Kennedy on Negotiation Gavin Kennedy, 2017-03-02 Negotiation is a vital skill for every manager As a result there are almost as many patented techniques for negotiation as there are managers each proclaiming to be the definitive route to success The authors behind these techniques keep their work very much to themselves Their fundamentally different approaches to negotiation remain in isolation from each other as if their authors were too polite to contradict others in the field In most cases when you are developing your negotiation skills this leaves you with a stark choice pick a single technique and ignore the rest Until now Kennedy on Negotiation is an authoritative and comprehensive guide to negotiation skills training and practice Dr Kennedy uses the well established Four Phases model as the structure around which he critiques constructively the numerous competing theories and models Gavin Kennedy s book is everything you would expect from one of the most respected writers on negotiation It is a readable and reliable guide to all that is best in the various contributions to negotiation training from authors such as John Nash Walton and McKersie Atkinson Nierenberg Rubin and Brown Gottschalk Karass Fisher and Ury and many more including Gavin Kennedy himself

Strategic Choice and International Relations David A. Lake, Robert Powell, 2020-05-05 The strategic choice approach has a long pedigree in international relations In an area often rent by competing methodologies editors David A Lake and Robert Powell take the best of accepted and contested knowledge among many theories With the contributors to this volume they offer a unifying perspective which begins with a simple insight students of international relations want to explain the choices actors make whether these actors be states parties ethnic groups companies leaders or individuals This synthesis offers three new benefits first the strategic interaction of actors is the unit of analysis rather than particular states or policies second these interactions are now usefully organized into analytic schemes on which conceptual experiments may be based and third a set of methodological bets is then made about the most productive ways to analyze the interactions Together these elements allow the pragmatic application of theories that may apply to a myriad of particular cases such as individuals protesting environmental degradation governments seeking to control nuclear weapons or the United Nations attempting to mobilize member states for international peacekeeping Besides the editors the six contributors to this book all distinguished scholars of international relations are Jeffrey A Frieden James D Morrow Ronald Rogowski Peter Gourevitch Miles Kahler and Arthur A Stein Their work is an invaluable introduction for scholars and students of international relations economists and government decision makers Growing Artificial Societies Joshua M. Epstein, Robert Axtell, 1996-10-11 Growing Artificial Societies is a milestone in social science research It vividly demonstrates the potential of agent based computer simulation to

break disciplinary boundaries It does this by analyzing in a unified framework the dynamic interactions of such diverse activities as trade combat mating culture and disease It is an impressive achievement Robert Axelrod University of Michigan How do social structures and group behaviors arise from the interaction of individuals Growing Artificial Societies approaches this question with cutting edge computer simulation techniques Fundamental collective behaviors such as group formation cultural transmission combat and trade are seen to emerge from the interaction of individual agents following a few simple rules In their program named Sugarscape Epstein and Axtell begin the development of a bottom up social science that is capturing the attention of researchers and commentators alike The study is part of the 2050 Project a joint venture of the Santa Fe Institute the World Resources Institute and the Brookings Institution The project is an international effort to identify conditions for a sustainable global system in the next century and to design policies to help achieve such a system Growing Artificial Societies is also available on CD ROM which includes about 50 animations that develop the scenarios described in the text Copublished with the Brookings Institution
