**Routledge Handbook of Science, Technology, and Society** Daniel Lee

Kleinman, Kelly Moore, 2014-06-05 Over the last decade or so the field of science and technology studies STS has become an intellectually dynamic interdisciplinary arena Concepts methods and theoretical perspectives are being drawn both from long established and relatively young disciplines From its origins in philosophical and political debates about the creation and use of scientific knowledge STS has become a wide and deep space for the consideration of the place of science and technology in the world past and present The Routledge Handbook of Science Technology and Society seeks to capture the dynamism and breadth of the field by presenting work that pushes the reader to think about science and technology and their intersections with social life in new ways The interdisciplinary contributions by international experts in this handbook are organized around six topic areas embodiment consuming technoscience digitization environments science as work rules and standards This volume highlights a range of theoretical and empirical approaches to some of the persistent and new questions in the field It will be useful for students and scholars throughout the social sciences and humanities including in science and technology studies history geography critical race studies sociology communications women s and gender studies anthropology and political science Biobanking of Human Biospecimens Pierre Hainaut, Jim Vaught, Kurt

Zatloukal, Markus Pasterk, 2021-08-25 Over the past 25 years biobanks of human specimens have become a cornerstone for research on human health and have empowered the omics revolution that characterizes biomedical science in the XXIst Century Today biobanking of human specimens is a critical component of the interface between clinical practice and translational research supporting the discovery and validation of new biomarkers of disease etiology risk early detection diagnosis prognosis prediction and relapse With the development of personalized medicine biobanking of cryopreserved specimens has become standard practice in order to investigate genetic transcriptomic proteomic metabolomics and immunological biomarkers useful to inform caregivers for therapeutic decisions Data generated from biobanked specimens represent a rapidly growing and highly valuable resource participating in the emergence of Big Data Medicine With the development of large computing capabilities and artificial intelligence data associated with biobanked specimens constitute a unique resource for the discovery and validation of new biomarkers and therapeutically actionable targets Interconnecting interoperating and sharing this data have become major issues for national health systems raising enormous stakes as well as major societal legal and cybersecurity challenges in terms of compliance with the protection of personal sensitive information This book project is the second part of an initiative launched in 2012 to produce a published corpus of knowledge encompassing all aspects of human biobanking as a central practice for research and medicine The first volume published in 2017 is entitled Human Biobanking Principles and Practice This first volume compiled a series of high level contributions overseeing the main developments that carried the progression of human biobanking as a research and biotechnological field over the past two decades This new book project will constitute de facto Volume 2 of the same initiative under the title Biobanking of Human Biospecimens lessons from 25 years of biobanking experience Hence the two volumes will share the

same generic title Biobanking of Human Biospecimens with different subtitles making clear that the two volumes are interrelated while highlighting their specificities in terms of what they actually cover As a result the two books are twins but can also be used independently of each other The overarching aim of the two volumes of Biobanking of Human Biospecimens is to provide a published one stop shop for state of the art information on what constitutes the field of human biobanking from conception of a biobank standard operating procedures ethical and societal aspects governance networking interoperability and economic sustainability This inclusive publication concept meets the needs of a vast readership including scientists doctors and technical staffs who are directly involved in biobanking operations scientists in other disciplines that heavily rely on biobanking such as genomics or proteomics stakeholders and policy makers and of course students for whom biobanking is becoming an important part of the training curriculum So far there has been a lack of major textbooks on biobanking Documentation for biobanking is widely available through numerous publications regulatory documents published by International or Governmental Agencies and sets of recommendations essentially accessible through the Internet However it is difficult to access a single top of the shelf reference that provides at a glance a large coverage of all aspects of human biobanking Fulfilling this need is the main origin of the concept for this back to back publication project To our knowledge there is currently no other publication project with the same breath and scope as this one in the field of biobanking
