Data Virtualization for Business Intelligence Systems Rick van der Lans,2012-07-25 Data virtualization can help you accomplish your goals with more flexibility and agility Learn what it is and how and why it should be used with Data Virtualization for Business Intelligence Systems In this book expert author Rick van der Lans explains how data virtualization servers work what techniques to use to optimize access to various data sources and how these products can be applied in different projects You ll learn the difference is between this new form of data integration and older forms such as ETL and replication and gain a clear understanding of how data virtualization really works Data Virtualization for Business Intelligence Systems outlines the advantages and disadvantages of data virtualization and illustrates how data virtualization should be applied in data warehouse environments You ll come away with a comprehensive understanding of how data virtualization will make data warehouse environments more flexible and how it make developing operational BI applications easier Van der Lans also describes the relationship between data virtualization and related topics such as master data management governance and information management so you come away with a big picture understanding as well as all the practical know how you need to virtualize your data First independent book on data virtualization that explains in a product independent way how data virtualization technology works Illustrates concepts using examples developed with commercially available products Shows you how to solve common data integration challenges such as data quality system interference and overall performance by following practical guidelines on using data virtualization

Apply data virtualization right away with three chapters full of practical implementation guidance Understand the big picture of data virtualization and its relationship with data governance and information management **Enterprise Knowledge Infrastructures** Ronald Maier,Thomas Hädrich,René Peinl,2009-04-21 Success of an organization is increasingly dependent on its capability to create an environment in order to improve productivity of knowledge work This book focuses on the concepts models and technologies that are used to design and implement such an environment It develops the vision of a modular yet highly integrated enterprise knowledge infrastructure and presents an idealized architecture replete with current technologies and systems The most important streams of technological development that are covered in the book are communication collaboration document and content management e learning enterprise portals business process management information life cycle management information retrieval and visualization knowledge management mobile computing application and network infrastructure Semantic Web and social software It includes learning goals exercises and case examples that help the reader to easily understand and practice the concepts **Introduction to Web Matrix** Colin Hardy,Simon Stobart,2003-08-22 An Introduction to Web Matrix provides an easy to follow treatment of the application of this new software which is rapidly becoming the preferred vehicle for the teaching of website design Written by two experienced users the material is presented in a way that makes it ideal for students meeting the subject for the first time whether they are on an undergraduate or postgraduate course The scope of the book includes the functionality of the software its installation and application and the design and operation of web based material using it Coverage of the use of HTML and SQL is also included as is the design and implementation of on line databases There are numerous examples to illustrate ideas and concepts The examples provide a practical illustration of how the software may be used At the conclusion of each chapter a set of exercises is provided to allow the reader to review and practice the material presented A simple introduction for users with no previous experience of the design process Abundant screen dumps and diagrams aid fast assimilation of the material Accompanying website with a wide range of facilities *Systems Analysis and Design* Alan Dennis,Barbara Wixom,David Tegarden,2015-03-02 Systems Analysis and Design An Object Oriented Approach with UML 5th Edition by Dennis Wixom and Tegarden captures the dynamic aspects of the field by keeping students focused on doing SAD while presenting the core set of skills that every systems analyst needs to know today and in the future The text enables students to do SAD not just read about it but understand the issues so they can actually analyze and design systems The text introduces each major technique explains what it is explains how to do it presents an example and provides opportunities for students to practice before they do it for real in a project After reading each chapter the student will be able to perform that step in the system development process *Aircraft Systems Integration of Air-Launched Weapons* Keith A. Rigby,2013-02-21 From the earliest days of aviation where the pilot would drop simple bombs by hand to the highly agile stealthy aircraft of today that can deliver smart ordnance with extreme accuracy engineers have striven to develop the

capability to deliver weapons against targets reliably safely and with precision Aircraft Systems Integration of Air Launched Weapons introduces the various aspects of weapons integration primarily from the aircraft systems integration viewpoint but also considers key parts of the weapon and the desired interactions with the aircraft required for successful target engagement Key features Addresses the broad range of subjects that relate directly to the systems integration of air launched weapons with aircraft such as the integration process system and subsystem architectures the essential contribution that open international standards have on improving interoperability and reducing integration costs and timescales Describes the recent history of how industry and bodies such as NATO have driven the need for greater interoperability between weapons and aircraft and worked to reduce the cost and timescales associated with the systems integration of complex air launched weapons with aircraft Explores future initiatives and technologies relating to the reduction of systems integration costs and timescales The systems integration of air launched weapons with aircraft requires a multi disciplinary set of engineering capabilities As a typical weapons integration life cycle spans several years new engineers have to learn the skills required by on the job training and working with experienced weapons integrators Aircraft Systems Integration of Air Launched Weapons augments hands on experience thereby enabling the development of subject matter expertise more quickly and in a broader context than would be achieved by working through the life cycle on one specific project This book also serves as a useful revision source for experienced engineers in the field Engineering Agile Big-Data Systems Kevin Feeney,Jim Davies,James Welch,2022-09-01 To be effective data intensive systems require extensive ongoing customisation to reflect changing user requirements organisational policies and the structure and interpretation of the data they hold Manual customisation is expensive time consuming and error prone In large complex systems the value of the data can be such that exhaustive testing is necessary before any new feature can be added to the existing design In most cases the precise details of requirements policies and data will change during the lifetime of the system forcing a choice between expensive modification and continued operation with an inefficient design Engineering Agile Big Data Systems outlines an approach to dealing with these problems in software and data engineering describing a methodology for aligning these processes throughout product lifecycles It discusses tools which can be used to achieve these goals and in a number of case studies shows how the tools and methodology have been used to improve a variety of academic and business systems
