Malaysia's Motorcycle Sector: Past and Present Possibilities in an Era of Energy Transition Sara Loo,2024-11-22
Malaysia has traditionally adopted an intensive automotive industrialization model and created its own vehicles under national brands The national car project started with Proton in 1983 and the national motorcycle project with Modenas in 1995 While policies and scholarship have focused on national car projects the two wheeler sector has stood in their shadow Modenas witnessed early growth and remains a popular brand after Yamaha and Honda it has however failed to hit export targets owing to limited technology transfer and the inability to scale In recent years there has been renewed interest in the two wheeler sector focusing on phasing out combustion motorcycles in favour of electric two wheelers E2Ws Still nascent Malaysia s electric two wheeler E2W sector appears to prioritize an extensive model of assembly and distribution rather than the protection of home grown brands Still in its infancy E2W adoption rates remain low at under 1 per cent albeit there has been high year over year growth since 2022 Interviews with E2W manufacturers regulators dealers and consumers reveal challenges beyond common issues like price range charging time maximum speed absence of servicing infrastructure and a second hand market Notably Malaysia lacks a suitable product for Malaysian roads and lifestyle due to insufficient institutional support for Research Development R D and talent matching With aspirations to be an E2Ws regional manufacturing hub the government and businesses should step up on public education to bridge the information gap rethink the R D support model for the electric vehicle industry and develop clarity surrounding what a Made in Malaysia motorcycle entails *Advances in Human Aspects of Transportation: Part II* Neville Stanton,Steven Landry,Giuseppe Di Bucchianico,Andrea Vallicelli,2021-07-19 Human Factors and Ergonomics have made a considerable contribution to the research design development operation and analysis of transportation systems which includes road and rail vehicles and their complementary infrastructure aviation and maritime transportation This book presents recent advances in the Human Factors aspects of Transportation These advances include accident analysis automation of vehicles comfort distraction of drivers understanding of distraction and how to avoid it environmental concerns in vehicle systems design intelligent transport systems methodological developments new systems and technology observational and case studies safety situation awareness skill development and training warnings and workload This book brings together the most recent human factors work in the transportation domain including empirical research human performance and other types of modeling analysis and development The issues facing engineers scientists and other practitioners of human factors in transportation research are becoming more challenging and more critical The common theme across these sections is that they deal with the

intersection of the human and the system Moreover many of the chapter topics cross section boundaries for instance by focusing on function allocation in NextGen or on the safety benefits of a tower controller tool This is in keeping with the systemic nature of the problems facing human factors experts in rail and road aviation and maritime research it is becoming increasingly important to view problems not as isolated issues that can be extracted from the system environment but as embedded issues that can only be understood as a part of an overall system
