Michael Flück, 2013-09-30

When a young dragon rider named Mkel and his dragon Gallanth begin having visions of the last horrendous war that the Dragon Alliance Republic fought against the Morgathian Empire they realize that these visions are warning them of a rising darkness and battle yet to come But as they train their soldiers for the war ahead they discover that the Morgathians aren't their only enemy someone within the Alliance is conspiring against them To make matters worse a group of power hungry senators known as the Party of the Enlightened is collaborating to bring about the Alliance's destruction Worried by their newfound foes and forever haunted by the death of his father Mkel must find a way to put the past behind him and bring his troops together if he and Gallanth hope to win the war But with the odds stacked against them and many difficult battles ahead Mkel can't help but wonder if he or the Alliance will survive The Theory and Practice of Social Machines Nigel Shadbolt, Kieron O'Hara, David De Roure, Wendy Hall, 2019-02-14

Social machines are a type of network connected by interactive digital devices made possible by the ubiquitous adoption of technologies such as the Internet the smartphone social media and the read write World Wide Web connecting people at scale to document situations cooperate on tasks exchange information or even simply to play Existing social processes may be scaled up and new social processes enabled to solve problems augment reality create new sources of value and disrupt existing practice This book considers what talents one would need to understand or build a social machine describes the state of the art and speculates on the future from the perspective of the EPSRC project SOCIAM The Theory and Practice of Social Machines The aim is to develop a set of tools and techniques for investigating constructing and facilitating social machines to enable us to narrow down pragmatically what is becoming a wide space by asking when will it be valuable to use these methods on a sociotechnical system The systems for which the use of these methods adds value are social machines in which there is rich person to person communication and where a large proportion of the machine's behaviour is constituted by human interaction **Beyond**

open access: visions for open evaluation of scientific papers by post-publication peer review Nikolaus

Kriegeskorte, Diana Deca, A scientific publication system needs to provide two basic services access and evaluation The traditional publication system restricts the access to papers by requiring payment and it restricts the evaluation of papers by relying on just 2-4 pre-publication peer reviews and by keeping the reviews secret As a result the current system suffers from a lack of quality and transparency of the peer review evaluation process and the only immediately available indication of a new paper's quality is the prestige of the journal it appeared in Open access is now widely accepted as desirable and is slowly beginning to become a reality However the second essential element evaluation has received less attention Open evaluation an ongoing post-publication process of transparent peer review and rating of papers promises to address the

problems of the current system However it is unclear how exactly such a system should be designed The evaluation system steers the attention of the scientific community and thus the very course of science For better or worse the most visible papers determine the direction of each field and guide funding and public policy decisions Evaluation therefore is at the heart of the entire endeavor of science As the number of scientific publications explodes evaluation and selection will only gain importance A grand challenge of our time therefore is to design the future system by which we evaluate papers and decide which ones deserve broad attention So far scientists have left the design of the evaluation process to journals and publishing companies However the steering mechanism of science should be designed by scientists The cognitive computational and brain sciences are best prepared to take on this task which will involve social and psychological considerations software design and modeling of the network of scientific papers and their interrelationships This Research Topic in Frontiers in Computational Neuroscience collects visions for a future system of open evaluation Because critical arguments about the current system abound these papers will focus on constructive ideas and comprehensive designs for open evaluation systems Design decisions include Should the reviews and ratings be entirely transparent or should some aspects be kept secret Should other information such as paper downloads be included in the evaluation How can scientific objectivity be strengthened and political motivations weakened in the future system Should the system include signed and authenticated reviews and ratings Should the evaluation be an ongoing process such that promising papers are more deeply evaluated How can we bring science and statistics to the evaluation process e g should rating averages come with error bars How should the evaluative information about each paper e g peer ratings be combined to prioritize the literature Should different individuals and organizations be able to define their own evaluation formulae e g weighting ratings according to different criteria How can we efficiently transition toward the future system Ideally the future system will derive its authority from a scientific literature on community based open evaluation We hope that these papers will provide a starting point
