Fredrickson, B. L. (2004). The broaden-and-build theory of positive emotions. *Philosophical Transactions of the Royal Society, 359*, 1367-1377.

The broaden-and-build theory describes the form and function of a subset of positive emotions, including joy, interest, contentment and love. A key proposition is that these positive emotions *broaden* an individual's momentary thought-action repertoire: joy sparks the urge to play, interest sparks the urge to explore, contentment sparks the urge to savour and integrate, and love sparks a recurring cycle of each of these urges within safe, close relationships. The broadened mindsets arising from these positive emotions are contrasted to the narrowed mindsets sparked by many negative emotions (i.e. specific action tendencies, such as attack or flee). A second key proposition concerns the consequences of these broadened mindsets: by broadening an individual's momentary thought-action repertoire—whether through play, exploration or similar activities—positive emotions promote discovery of novel and creative actions, ideas and social bonds, which in turn *build* that individual's personal resources; ranging from physical and intellectual resources, to social and psychological resources. Importantly, these resources function as reserves that can be drawn on later to improve the odds of successful coping and survival. This chapter reviews the latest empirical evidence supporting the broaden-and-build theory and draws out implications the theory holds for optimizing health and well-being.

How to Enhance Learning Efficiency When Online Learning is Popular and Indispensable: Theory, Research and Practice Rong Lian, Chang Liu, Juzhe Xi, 2024-07-17 Online learning has become more and more common globally whether for comfort adapting to work hours or just having the freedom to study from anywhere And now under the coronavirus pandemic as people are having to stay at home it has become more important than ever Although the popularity of wireless network and portable smart device makes it possible for people to acquire and learn knowledge anytime and anywhere it does not necessarily mean an increased learning performance Relevant research in cognitive science has revealed possible limitations in online learning For example the knowledge acquired through online learning tends to be fragmented and lacks guidance for integrated thinking among different subjects which makes it difficult for learners to form a systematic knowledge structure Learners may experience cognitive overload metacognitive illusion and low learning efficiency in self regulated learning It follows that in the post COVID 19 era online learning puts forward new requirements and challenges to the contemporary students not only to their learning strategies but positive character traits in learning Most of the current learning theories were developed in the early 20th century and may not fit in well with the current situation then possibly leading to inefficient learning and increased learning burden Therefore it is necessary and important to reexplore the influencing factors and mechanisms that affect the learning efficiency of students at all levels nowadays based on which we could construct a theoretical model of efficient

learning model **Effects of Physical Activity on Psychological Well-being** Nebojša Trajković, Petar M. Mitic, Špela Bogataj, Renata Baric, 2023-02-27 The Social Brain: New Insights from Social, Clinical, and Biological Psychology Carmelo Mario Vicario, Gabriella Martino, Giuseppe Craparo, Chiara Lucifora, Paola Magnano, 2025-02-11

The growing interest in Neuroscience by social scientists and philosophers has favored the emergence of a new multidisciplinary field Neuroethics. This discipline addresses the study of the social cognitive principles, the neurobiological determinants, and the impact on technology design and use of moral judgment, decision making, and behavior. It adopts an integrated approach which builds on a backbone of a philosophical spirit while using the scientific method in the study of the concept of morality and its expressions from bodily reactions to behaviors. Related topics may include social cognition, theory of mind, empathy, altruism, conformity, prejudice, and discrimination, attitudes, and persuasion. This collection is based on a multidisciplinary approach that relies on the cross fertilization between disciplines such as philosophy, social psychology, social neuroscience, and clinical psychology to answer a fundamental question: what does it mean to be moral animals? The research topic aims to make recent discoveries on moral behavior and social cognition accessible to a broad audience interested in how morality defines human beings, their interactions, and their social world.

Friendship, Altruism and Morality (Routledge Revivals) Laurence A. Blum, 2009-12-15. Friendship, Altruism and Morality originally published in 1980 gives an account of altruistic emotions: compassion, sympathy, concern, and friendship that brings out their moral value. Blum argues that moral theories centered on rationality, universal principle, obligation, and impersonality cannot capture this moral importance. This was one of the first books in contemporary moral philosophy to emphasize the moral significance of emotions to deal with friendship as a moral phenomenon and to challenge the rationalism of standard interpretations of Kant, although Blum's sentimentalism owes more to Schopenhauer than to Hume. It was a forerunner to care ethics and feminist ethics, more generally to virtue ethics, and to subsequent influential interpretations of Kant that attempted to room for altruistic emotion and friendship and other forms of particularism and partialism. In addition, the work has been widely influential in religious studies, political theory, bioethics, and feminist ethics.
