Computational Intelligence and Mathematics for Tackling Complex Problems 3 István Á. Harmati, László T. Kóczy, Jesús Medina, Eloísa Ramírez-Poussa, 2021-08-25 Complex problems and systems which prevail in the real world cannot often be tackled and solved either by traditional methods offered by mathematics or even the traditional computer science CS and and artificial intelligence AI What is the way out of this dilemma Advanced methodologies and tools and techniques mimicking human reasoning or the behavior of animals animal populations or certain parts of the living bod based on traditional computer science science and the initial approaches of artificial intelligence are often referred to as biologically inspired methods or often computational intelligence CI Computational intelligence offers effective and efficient solutions to many unsolvable problems problems However it is far from being a ready to use and complete collection of approaches and is rather a continuously developing field without clear borders The emerging new models and algorithms of computational intelligence are deeply rooted in the vast apparatus of traditional mathematics Thus the investigation of connections and synergy between mathematics and computational intelligence is an eminent goal which is periodically pursued by a group of mathematicians and computational intelligence researchers who regularly attend the annual European Symposia on Computational Intelligence and Mathematics ESCIM Some relevant papers from the last ESCIM 2020 are included in this

Mass Transfer with Chemical Reaction in Multiphase Systems: Three-phase systems Erdoğan Alper, 1983 The phenomenon of mass transfer with chemical reaction takes place whenever one phase is brought into contact with one or more other phases not in chemical equilibrium with it This phenomenon has industrial biological and physiological importance In chemical process engineering it is encountered in both separation processes and reaction engineering In some cases a chemical reaction may deliberately be employed for speeding up the rate of mass transfer and or for increasing the capacity of the solvent in other cases the multiphase reaction system is a part of the process with the specific aim of product formation Finally in some cases for instance distillation with chemical reaction both objectives are involved Although the subject is clearly a chemical engineering undertaking it requires often a good understanding of other subjects such as chemistry and fluid mechanics etc leading to publications in diversified areas

On the other hand the subject has always been a major field and one of the most fruitful for chemical engineers
