Meltdown Jorge Daniel Taillant, 2021 We hear about pieces of ice the size of

continents breaking off of Antarctica rapidly melting glaciers in the Himalayas and ice sheets in the Arctic crumbling to the sea but does it really matter Will melting glaciers change our lives Absolutely The ice ages and the interglacial periods like we live in now are built and destroyed by glaciers Glaciers hold three quarters of our freshwater yet we don't have laws to protect them from climate change Melting glaciers raise the seas alter global ecosystems warm our climate and bring on floods that swamp millions of acres of land destroying coastal ecosystems and leaving hundreds of millions homeless Healthy glaciers help keep our planet cool by reflecting solar heat away from the Earth and provide critical freshwater supply to billions that live within their meltwater runoff basins But melting glaciers alter ocean temperature warm the atmosphere and cause havoc to the ocean currents and to the global jet stream causing inclement weather prolonged and recurrent droughts heavy rains and intense frequent and unpredictable storms As glaciers melt away their critical environmental functions and services will wither And as climate change warms their core their weakening internal structure will cause a growing number of glacier tsunamis that can send deadly massive ice blocks rocks earth and billions of liters of water rushing down mountain valleys that take out anything in their path It has happened before in the Himalayas in the Central Andes in the Rockies and Western Cascades and in the European Alps and it will happen again As glaciers melt so do the vast swaths of permafrost environments that thrive in their surroundings where thawing millenary terrain rich in ice but also in methane gas captured hundreds of thousands of years ago is now released into the atmosphere intensifying climate change even further In his new book Meltdown Jorge Daniel Taillant takes readers deeper into the cryosphere and connects the dots between climate change glacier melt and the impacts that receding glacier ice brings to livability on Earth to our environments and to our neighborhoods He walks us through the little known realm of the periglacial environment a world where invisible subsurface rock glaciers with solid ice cores that will outlive exposed glaciers in our warming climate but will they suffice to maintain our cryosphere and climate ecology in balance In two closing chapters Taillant looks at actions that can help stop climate change and save glaciers and also contrasts how society politics and our leaders have responded to address the COVID 19 pandemic and yet largely failed to address the even larger looming and escalating crisis of climate change Meltdown is about glaciers and their unfolding demise during one of the most critical moments of our climate crisis We may still be in time to save the cryosphere if we can reconsider glaciers in a whole new light and understand the critical role they play in our own sustainability and if we can awaken to see how through glacier melt geological ages are changing right before our eyes
