*Encyclopedia of Agriculture and Food Systems* Neal K. Van Alfen, 2014-07-29 Encyclopedia of Agriculture and Food

Systems Second Edition Five Volume Set addresses important issues by examining topics of global agriculture and food systems that are key to understanding the challenges we face. Questions it addresses include: Will we be able to produce enough food to meet the increasing dietary needs and wants of the additional two billion people expected to inhabit our planet by 2050? Will we be able to meet the need for so much more food while simultaneously reducing adverse environmental effects of today's agriculture practices? Will we be able to produce the additional food using less land and water than we use now? These are among the most important challenges that face our planet in the coming decades. The broad themes of food systems and people, agriculture and the environment, the science of agriculture, agricultural products and agricultural production systems are covered in more than 200 separate chapters of this work. The book provides information that serves as the foundation for discussion of the food and environment challenges of the world. An international group of highly respected authors addresses these issues from a global perspective and provides the background, references and linkages for further exploration of each of topics of this comprehensive work. Addresses important challenges of sustainability and efficiency from a global perspective. Takes a detailed look at the important issues affecting the agricultural and food industries today. Full colour throughout. **Datafication of Public Opinion and the Public Sphere** Slavko

Splichal, 2022-07-12. The book anchored in stimulating debates about the Enlightenment ideas of publicness, analyses historical changes in the core phenomena of publicness, possibilities, conditions and obstacles to developing a public sphere in which the public reflexively creates, articulates and expresses public opinion. It is focused on the historical transformation from public use of reason through the identification of public opinion in opinion polls to contemporary opinion mining in which the Enlightenment idea of public expression of opinion has been displaced by the technology of extracting opinions. It heralds a new critical impetus in theory and research of publicness at a time when critical social thought is sharply criticising and even abandoning the notion of the public sphere, much like the notion of public opinion decades ago due to its predominantly administrative use. *Medicina funcional* Alexander Krouham, Pablo Krouham, 2018-05-18.
