

Modes Of Transportation

Metro Manila is the metropolitan region which has the most populous metropolitan area in the Philippines and 11th most populous in the world. Based on 2010 national statistics it had a population of 11,855,975 populations that is 13% of national population (2010 Population and Housing Census: NCR). The rapid population growth corresponds to more economic needs and mobility for transport of goods, services and products. The direct relationship between urban areas and its population must meet the standard for deficiency of road and highway length as well as modes of transportation in metropolitan area. Nowadays, transportation is accessible at it is. Different modes of transportation are well available for the passenger in provinces and more advantageously in metropolitan area. It is the prerogative of the passenger to choose what will be the mode that would bring him/her to their destination as fast as possible. Sometimes, comfort and convenience are sacrificed in order to meet the time in school, work, event, etc.

Theoretical framework

Figure shows the model of the study – the theoretical framework. The respondents, from the first year students of pharmacy, shall be exposed to three experimental conditions, to elicit their waiting behaviors. Economic – efficient mobility for good vehicles that comfortably good for passenger, local economic development like LRT and MRT that are functionally good, and operational efficiency that passengers are satisfied from their travel. Social-social equity (fairness), human safety and health affordability, community cohesion, and cultural preservation from the passenger. Environmental – air, noise and water reductions, climate change emissions resource conservation, open – diversity, and biodiversity protection.

Statement of the Problem

The study aimed to determine the behavior of Freshmen Students in Pharmacy of Centro Escolar University in considering different modes of transportation possible through certain place. Apart from that, the researches aimed to identify the following: 1. What is the attitude of the passenger towards selecting mode of transportation that suits their comfort and convenience? 2. What is the mode of transportation that is easy to ride?

3. Why are freshmen Student of pharmacy are being late and absent in class? 4. How can they limit their late and absences?

Hypothesis

Amidst the growing number of population in the Philippines and blinding pollution it

Un-Habitat, 2013-10-30 Urban transport systems worldwide are faced by a multitude of challenges Among the most visible of these are the traffic gridlocks experienced on city roads and highways all over the world The prescribed solution to transport problems in most cities has thus been to build more infrastructures for cars with a limited number of cities improving public transport systems in a sustainable manner However a number of challenges faced by urban transport systems such as greenhouse gas emissions noise and air pollution and road traffic accidents do not necessarily get solved by the construction of new infrastructure Planning and Design for Sustainable Urban Mobility argues that the development of sustainable urban transport systems requires a conceptual leap The purpose of transportation and mobility is to gain access to destinations activities services and goods Thus access is the ultimate objective of transportation As a result urban planning and design should focus on how to bring people and places together by creating cities that focus on accessibility rather than simply increasing the length of urban transport infrastructure or increasing the movement of people or goods Urban form and the functionality of the city are therefore a major focus of this report which highlights the importance of integrated land use and transport planning This new report of the United Nations Human Settlements Programme UN Habitat the world s leading authority on urban issues provides some thought provoking insights and policy recommendations on how to plan and design

sustainable urban mobility systems The Global Report on Human Settlements is the most authoritative and up to date global assessment of human settlements conditions and trends Preceding issues of the report have addressed such topics as Cities in a Globalizing World The Challenge of Slums Financing Urban Shelter Enhancing Urban Safety and Security Planning Sustainable Cities and Cities and Climate Change **Future Transportation Technologies** ,1981 ERDA Energy Research Abstracts United States.
