This book introduces path breaking applications of concepts from mathematical topology to music theory topics including harmony chord progressions rhythm and music classification Contributions address topics of voice leading Tonnetze maps of notes and chords and automatic music classification Focusing on some geometrical and topological aspects of the representation and formalisation of musical structures and processes the book covers topological features of voice leading geometries in the most recent advances in this mathematical approach to representing how chords are connected through the motion of voices leading to analytically useful simplified models of high dimensional spaces It generalizes the idea of a Tonnetz a geometrical map of tones or chords and shows how topological aspects of these maps can correspond to many concepts from music theory The resulting framework embeds the chord maps of neo Riemannian theory in continuous spaces that relate chords of different sizes and includes extensions of this approach to rhythm theory It further introduces an application of topology to automatic music classification drawing upon both static topological representations and time series evolution showing how static and dynamic features of music interact as features of musical style This volume will be a key resource for academics researchers and advanced students of music music analyses music composition mathematical music theory computational musicology and music informatics It was originally published as a special issue of the Journal of Mathematics and Music

*Hearing Homophony* Megan KAES Long, 2020-04-28 The question of tonality's origins in music's pitch content has long vexed many scholars of music theory However tonality is not ultimately defined by pitch alone but rather by pitch's interaction with elements like rhythm meter phrase structure and form Hearing Homophony investigates the elusive early history of tonality by examining a constellation of late Renaissance popular songs which flourished throughout Western Europe at the turn of the seventeenth century Megan KAES Long argues that it is in these songs rather than in more ambitious secular and sacred works that the foundations of eighteenth century style are found Arguing that tonality emerges from features of modal counterpoint in particular the rhythmic phrase structural and formal processes that govern it and drawing on the arguments of theorists such as Dahlhaus Powers and Barnett she asserts that modality and tonality are different in kind and not mutually exclusive Using several hundred homophonic partsongs from Italy Germany England and France Long addresses a historical question of critical importance to music theory musicology and music performance Hearing Homophony presents not only a new model of tonality's origins but also a more comprehensive understanding of what tonality is providing novel insight into the challenging world of seventeenth century music

objects that depict utilise or respond to the metaphor of musical harmony yet harmony in this period relied on a certain amount of carefully mannered dissonance Using visual and literary sources alongside musical works author Eleanor Chan explores the rise of the false relation a variety of dissonance that despite being officially frowned upon by contemporary theoretical treatises became characteristic of English vocal music between ca 1550 and 1630 [The Routledge Companion to Popular Music Analysis](#) Ciro Scotto,Kenneth M. **Mathematics and the Craft of Thought in the Anglo-Dutch Renaissance** Eleanor Chan,2021-09-30 The development of a coherent cohesive visual system of mathematics brought about a seminal shift in approaches towards abstract thinking in western Europe Vernacular translations of Euclid s Elements made these new and developing approaches available to a far broader readership than had previously been possible Scholarship has explored the way that the language of mathematics leaked into the literary cultures of England and the Low Countries but until now the role of visual metaphors of making and shaping in the establishment of mathematics as a practical tool has gone unexplored Mathematics and the Craft of Thought sheds light on the remarkable culture shift surrounding the vernacular language translations of Euclid and the geometrical imaginary that they sought to create It shows how the visual language of early modern European geometry was constructed by borrowing and quoting from contemporary visual culture The verbal and visual language of this form of mathematics far from being simply immaterial was designed to tantalize with material connotations This book argues that in a very real sense practical geometry in this period was built out of craft metaphors

In *Symphonic Spectacles*, author Sam Reenan presents a set of case studies using works by Strauss, Beach, Ellington and Mahler among others to show readers how analyses of these works can tease apart the compositional design and reception histories of each piece. **A Blaze of Light in Every Word** Victoria Malawey, 2020-05-01 The human singing voice holds immense power to convey mood, emotion and identity. In songs, provide music's undeniably wow moments and communicate a pop song's meaning perhaps more than any other musical parameter. And unlike the other aspects of musical content like harmony, form, melody and rhythm for which generations of scholars have formed sophisticated analyses, scholarly approaches to vocal delivery remain grossly underdeveloped. An exciting and much-needed new approach, *A Blaze of Light in Every Word*, presents a systematic and encompassing conceptual model for analyzing vocal delivery. Author Victoria Malawey focuses on three overlapping areas of inquiry: pitch, prosody and quality, while drawing on research from music theory and pedagogy as well as gender studies and philosophy to situate the sonic and material aspects of vocal delivery among broader cultural, philosophical and anthropological approaches to voice. Malawey develops a much-needed and innovative set of analytical tools through in-depth analyses of popular song recordings in genres spanning from hip hop to death metal. *A Blaze of Light in Every Word* brings new clarity to the relationship between the voice's sonic content and its greater signification, helping us understand the complexity and uniqueness of singing voices.

**Measuring Music in the Early Modern Era** Roger Mathew Grant, 2014-10-21 Beating Time Measuring Music in the Early Modern Era chronicles the shifting relationships between ideas about time in music and science from the sixteenth through the early nineteenth centuries Centered on theories of musical meter the book investigates the interdependence between theories of meter and conceptualizations of time from the age of Zarlino to the invention of the metronome These formulations have evolved throughout the history of Western music reflecting fundamental reevaluations not only of music but also of time itself Drawing on paradigms from the history of science and technology and the history of philosophy author Roger Mathew Grant illustrates ways in which theories of meter and time informed by one another have manifested themselves in the field of music During the long eighteenth century treatises on subjects such as aesthetics music theory mathematics and natural philosophy began to reflect an understanding of time as an absolute quantity independent of events This gradual but conclusive change had a profound impact on the network of ideas connecting time meter character and tempo Investigating the impacts of this change Grant explores the timekeeping techniques musical and otherwise that implemented this conceptual shift both technologically and materially Bringing together diverse strands of thought in a broader intellectual history of temporality Grant s study fills an unexpected yet conspicuous gap in the history of music theory and is essential reading for music theorists and composers as well as historical musicologists and practitioners of historically informed performance
