most widely used techniques and methods that apply to nanostructures and discusses typical applications to single nanoscale objects as well as to ensembles of such objects Section I Techniques and Methods overviews the physical principles of the main techniques and describes those operational modes that are most relevant to nanoscale characterization It provides sufficient technical detail so that readers and prospective users can gain an appreciation of the strengths and limitations of particular techniques The section covers both mainstream and less commonly used techniques Section II Applications of Techniques to Structures of Different Dimensionalities and Functionalities deals with the methods for materials characterization of generic types of systems using carefully chosen illustrations from the literature Each chapter begins with a brief description of the materials and supplies a context for the methods for characterization The volume concludes with a series of flow charts and brief descriptions of tactical issues The authors focus on the needs of the research laboratory but also address those of quality control industrial troubleshooting and online analysis Characterization of Nanostructures describes those techniques and their operational modes that are most relevant to nanoscale characterization It is especially relevant to systems of different dimensionalities and functionalities The book builds a bridge between generalists who play vital roles in the post disciplinary area of nanotechnology and specialists who view themselves as more in the context of the discipline

An Approach to Assessing the Technical Feasibility and Market Potential of a New Automotive Device Rand Zero Emission Fuel Saver Study Team,2007 Save the World Air STWA has developed magnet based devices including its Zero Emission Fuel Saver ZEFS that it claims can improve vehicle fuel economy and reduce emissions These devices are designed to be fitted as original equipment onto internal combustion engines or to be retrofitted onto existing engines STWA asked the RAND Corporation to help develop a plan for assessing the technical basis required for successful commercialization of ZEFS STWA also sought RAND s advice in examining potential market opportunities for ZEFS This report summarizes RAND s analysis of these two issues concluding the following Application of magnetic fields has not been shown in the literature to lower the viscosity of automotive fuels Along with empirical testing establishing a theoretical basis underlying the effect of magnetic fields on fuel viscosity surface tension and atomization might provide useful information for developing and evaluating magnetic field based fuel treatment devices So far the test results for use of the device are at best mixed Should further laboratory analysis and in use testing provide clearer and more positive outcomes the market potential for the device will depend significantly on the advances realized from other technologies and regulatory policies and on its cost effectiveness relative to other outcomes [IAHR Membership Directory](#) ,2006
