Enactivist Interventions Shaun Gallagher, 2017-07-26 Enactivist Interventions is an interdisciplinary work that explores how theories of embodied cognition illuminate many aspects of the mind including intentionality representation the affect perception action and free will higher order cognition and intersubjectivity Gallagher argues for a rethinking of the concept of mind drawing on pragmatism phenomenology and cognitive science Enactivism is presented as a philosophy of nature that has significant methodological and theoretical implications for the scientific investigation of the mind Gallagher argues that like the basic phenomena of perception and action sophisticated cognitive phenomena like reflection imagining and mathematical reasoning are best explained in terms of an affordance based skilled coping He offers an account of the continuity that runs between basic action affectivity and a rationality that in every case remains embodied Gallagher's analysis also addresses recent predictive models of brain function and outlines an alternative enactivist interpretation that emphasizes the close coupling of brain body and environment rather than a strong boundary that isolates the brain in its internal processes The extensive relational dynamics that integrates the brain with the extra neural body opens into an environment that is physical social and cultural and that recycles back into the enactive process Cognitive processes are in the world rather than in the head they are situated in affordance spaces defined across evolutionary developmental and individual histories and are constrained by affective processes and normative dimensions of social and cultural practices
