**Data and Safety Monitoring Committees in Clinical Trials, Second Edition** Jay Herson, 2016-12-19 Praise for the first edition: Given the author's years of experience as a statistician and as a founder of the first DMC in pharmaceutical industry trials, I highly recommend this book not only for experts because of its cogent and organized presentation but more importantly for young investigators who are seeking information about the logistical and philosophical aspects of a DMC. S. T. Ounpraseuth, The American Statistician. In the first edition of this well-regarded book, the author provided a groundbreaking and definitive guide to best practices in pharmaceutical industry data monitoring committees (DMCs). Maintaining all the material from the first edition and adding substantial new material, *Data and Safety Monitoring Committees in Clinical Trials, Second Edition* is ideal for training professionals to serve on their first DMC as well as for experienced clinical and biostatistical DMC members, sponsor, and regulatory agency staff. The second edition guides the reader through newly emerging DMC responsibilities brought about by regulations, emphasizing risk vs. benefit and the emergence of risk-based monitoring. It also provides the reader with many new statistical methods, clinical trial designs, and clinical terminology that have emerged since the first edition. The references have been updated, and the very popular end of chapter Q&A section has been supplemented with many new experiences since the first edition. New to the Second Edition: Presents statistical methods, tables, listings, and graphs appropriate for safety review, efficacy analysis, and risk vs. benefit analysis. SPERT and PRISMA initiatives. Newly added interim analysis for efficacy and futility section. DMC responsibilities in SUSARs (Serious Unexpected Serious Adverse Reactions), basket trials, umbrella trials, dynamic treatment strategies, SMART trials, pragmatic trials, biosimilar trials, companion diagnostics, etc. DMC responsibilities for data quality and fraud detection. Fraud Recovery Plan. Use of patient-reported outcomes of safety. Use of meta-analysis and data outside the trial. New ideas for training and compensation of DMC members. Jay Herson is Senior Associate Biostatistics, Johns Hopkins Bloomberg School of Public Health, where he teaches courses on clinical trials and drug development based on his many years' experience in clinical trials in academia and the pharmaceutical industry.

**Camptothecins in Cancer Therapy** Val R. Adams, 2007-10-27 A critical review our current understanding of camptothecins their shortcomings and of the possibilities for improving their clinical performance The authors discuss new camptothecin analog development drug delivery issues for optimizing their anticancer activity and their potential use in a variety of different cancers Additional chapters describe what is known about the biochemistry the pharmacology and the chemistry of the camptothecins including the mechanism of topoisomerase and how camptothecins poison this enzyme the use of animal models in defining the anticancer potential of camptothecins and the question of camptothecin resistance

Deoxynucleoside Analogs in Cancer Therapy Godefridus J Peters, 2007-11-07 Successful cancer chemotherapy relies heavily on the application of various deoxynucleoside analogs Since the very beginning of modern cancer chemotherapy a number of antimetabolites have been introduced into the clinic and subsequently applied widely for the treatment of many malignancies both solid tumors and hematological disorders In the latter diseases cytarabine has been the mainstay of treatment of acute myeloid leukemia Although many novel compounds were synthesized in the 1980s and 1990s no real improvement was made However novel technology is now capable of elucidating the molecular basis of several inborn errors as well as some specific malignancies This has enabled the synthesis of several deoxynucleoside analogs that could be applied for specific malignancies such as pentostatin and subsequently chlorodeoxyadenosine cladribine for the treatment of hairy cell leukemia Already in the early stage of deoxynucleoside analog development it was recognized that several of these compounds were very effective in the treatment of various viral infections such as for the treatment of herpes infections This formed the basis initially for the design of azidothymidine and subsequently many other analogs which are currently successfully used for the treatment of HIV infections As a spin off of these research lines some compounds not eligible for development as antiviral agents appeared to be very potent anticancer agents The classical example is gemcitabine now one of the most widely applied deoxynucleoside analogs used for the combination treatment of non small cell lung cancer pancreatic cancer bladder cancer and ovarian cancer
