## RECTILINEAR MOTION PART 1

3. A ball is dropped from the top of a tower 80 ft high at the same instant that a second ball is thrown upward from the ground with an initial velocity of 40 ft/sec. When and where do they pass, and with what relative velocity?  $g = 32.2 \text{ ft/sec}^2$

ball 1  
 $h = V_0 t + \frac{1}{2} a t^2$   
 $\checkmark h = 40t - \frac{1}{2} (32.2 \text{ ft/sec}^2) t^2$   
 $\checkmark (h) = 40t - \frac{1}{2} (32.2) t^2 \rightarrow \text{eqn ①}$

ball 2  
 $-(80-h) = V_0 t + \frac{1}{2} a t^2$   
 $\checkmark -(80-h) = \frac{1}{2} (-32.2) t^2$

$\checkmark -(80-h) = -16.1 t^2$   
 $-(80-h) = -16.1 t^2$

$h - 80 = -16.1 t^2$

$\checkmark h = 80 - 16.1 t^2 \rightarrow \text{eqn ②}$

$80 - 16.1 t^2 = 40t - 16.1 t^2$

$80 = 40t$

$t = \frac{80}{40} = 2\text{s}$

$\checkmark t = 2\text{s}$

**Solutions for Singers** Richard Miller, 2004-01-08 While many texts and courses on the art of singing offer comprehensive overviews of technique and performance few have time to delve into the specific questions they spawn *Solutions for Singers* explores these unanswered questions filling in gaps that professional performers students of singing and voice teachers have long sought to close Fielding over 200 questions distinguished teacher and performer Richard Miller tackles problems raised during hundreds of his master classes and pedagogy courses He deliberately avoids abstract generalities concentrating instead on specific recurring questions What are some good exercises to loosen or relax tension in the back of the tongue Do you apply the same principles regarding breathing to a younger student that you do to older students What is meant by voiced and unvoiced consonants Is there a female falsetto Through such specialized questions Miller probes the very essence of artistic expression The questions are organized under ten broad topics which Miller considers from various angles He couples traditional and modern philosophies to present the most relevant and precise solutions The result is an invaluable handbook for singers which read either sequentially or selectively provides a unique and pragmatic approach to vocal artistry and technique

**Structure and Dynamics of Solutions** Hideyuki Ohtaki, H. Yamatera, 2013-10-22 Recent advances in the study of structural and dynamic properties of solutions have provided a molecular picture of solute solvent interactions Although the study of thermodynamic as well as electronic properties of solutions have played a role in the development of research on the rate and mechanism of chemical reactions such macroscopic and microscopic properties are insufficient for a deeper understanding of fast chemical and biological reactions In order to fill the gap between the two extremes it is necessary to know how molecules are arranged in solution and how they change their positions in both the short and long range This book has been designed to meet these criteria It is possible to develop a sound microscopic picture for reaction dynamics in solution without molecular level knowledge of how reacting ionic or neutral species are solvated and how rapidly the molecular environment is changing with time A variety of actual examples is given as to how and when modern molecular approaches can be used to solve specific solution problems The following tools are discussed x ray and neutron diffraction EXAFS and XANES molecular dynamics and Monte Carlo computer simulations Raman infrared NMR fluorescence and photoelectron emission spectroscopic methods conductance and viscosity measurements high pressure techniques and statistical mechanics methods Static and dynamic properties of ionic solvation molecular solvation ion pair formation ligand exchange reactions and typical organic solvents are useful for bridging the gap between classical thermodynamic studies and modern single molecule studies in the gas phase The book will be of interest to solution physical inorganic analytical and structural chemists as well as to chemical kineticists

Localization and Solitary Waves in Solid Mechanics A. R. Champneys, G. W. Hunt, J. M. T. Thompson, 1999 This book is a collection of recent reprints and new material on fundamentally nonlinear problems in structural systems which demonstrate localized responses to continuous inputs It has two intended audiences For mathematicians and physicists it should provide useful new insights into a classical yet rapidly developing area of application of the rich subject of dynamical systems theory For workers in structural and solid mechanics it introduces a new methodology for dealing with structural localization and the related topic of the generation of solitary waves Applications range from classical problems such as the buckling of cylindrical shells twisted rods and pipelines to the folding of geological strata the failure of sandwich structures and the propagation of solitary waves in suspended beam systems

Singing Dan H. Marek, 2006-12-28 The Italian singing technique Bel Canto instructs He who knows how to breathe and how to pronounce knows how to sing Singing The First Art incorporates the techniques of Bel Canto along with those of masters like Berton Coffin and Manuel Garcia to promote and facilitate vocal excellence Many concepts are described from correct posture and alignment to improving and maintaining proper breathing from good pronunciation and diction to producing an even pure tone and from vocal ranges to singing within and smoothly shifting between vocal registers Mannes Vocal Faculty member Dan H Marek effectively breaks

down these complicated concepts with clear exercises helping the vocal student to achieve freedom and complete control over his or her instrument A primary section on the history of singing stresses the importance of understanding vocal history while inspiring and motivating the student through the experiences of opera stars such as Enrico Caruso Maria Callas and Jussi Björling The second section explains vocal techniques including the use and proper pronunciation of the IPA International Phonetic Alphabet and provides 64 specific exercises with clearly defined goals designed to overcome faults and to develop vocal virtuosity Complete instructions for transposing the exercises for both male and female voices are included as well as drawings of the exercises musical examples from vocal literature excellent anatomical illustrations by Frank Netter MD and copious photographs of opera stars *Singing The First Art* is an invaluable text for students professionals singers conductors composers and vocal medical professionals or anyone interested in understanding and appreciating the vocal art

Press 2008 Some attempts to use contact geometry in physics were made in the monograph Contact Geometry and Nonlinear Differential Equations Cambridge U Press 2007 Unfortunately even the excellent style of this monograph is not sufficient to attract the attention of the physics community to this type of problems This book is the first serious attempt to change the existing status quo In it we demonstrate that in fact all branches of theoretical physics can be rewritten in the language of contact geometry and topology from mechanics thermodynamics and electrodynamics to optics gauge fields and gravity from physics of liquid crystals to quantum mechanics and quantum computers etc The book is written in the style of famous Landau Lifshitz L L multivolume course in theoretical physics This means that its readers are expected to have solid background in theoretical physics at least at the level of the L L course No prior knowledge of specialized mathematics is required All needed new mathematics is given in the context of discussed physical problems As in the L L course some problems exercises are formulated along the way and again as in the L L course these are always supplemented by either solutions or by hints with exact references Unlike the L L course though some definitions theorems and remarks are also presented This is done with the purpose of stimulating the interest of our readers in deeper study of subject matters discussed in the text
