Pletcher, 2016-04-19 Thoroughly updated to include the latest developments in the field this classic text on finite difference and finite volume computational methods maintains the fundamental concepts covered in the first edition As an introductory text for advanced undergraduates and first year graduate students *Computational Fluid Mechanics and Heat Transfer* Thi **Nodal Discontinuous Galerkin Methods** Jan S. Hesthaven, Tim Warburton, 2007-12-20 This book offers an introduction to the key ideas basic analysis and efficient implementation of discontinuous Galerkin finite element methods DG FEM for the solution of partial differential equations It covers all key theoretical results including an overview of relevant results from approximation theory convergence theory for numerical PDE s and orthogonal polynomials Through embedded Matlab codes coverage discusses and implements the algorithms for a number of classic systems of PDE s Maxwell s equations Euler equations incompressible Navier Stokes equations and Poisson and Helmholtz equations

Numerical Modelling and Experimental Testing of Heat Exchangers Dawid Taler, 2018-05-17 This book presents new methods of numerical modelling of tube heat exchangers which can be used to perform design and operation calculations of exchangers characterized by a complex flow system It also proposes new heat transfer correlations for laminar transition and turbulent flows A large part of the book is devoted to experimental testing of heat exchangers and methods for assessing the indirect measurement uncertainty are presented Further it describes a new method for parallel determination of the Nusselt number correlations on both sides of the tube walls based on the nonlinear least squares method and presents the application of computational fluid dynamic CFD modeling to determine the air side Nusselt number correlations Lastly it develops a control system based on the mathematical model of the car radiator and compares this with the digital proportional integral derivative PID controller The book is intended for students academics and researchers as well as for designers and manufacturers of heat exchangers **Computational Acoustics of Noise Propagation in Fluids - Finite and Boundary Element Methods** Steffen Marburg, Bodo Nolte, 2008-02-27 The book provides a survey of numerical methods for acoustics namely the finite element method FEM and the boundary element method BEM It is the first book summarizing FEM and BEM and optimization for acoustics The book shows that both methods can be effectively used for many other cases FEM even for open domains and BEM for closed ones Emphasis of the book is put on numerical aspects and on treatment of the exterior problem in acoustics i e noise radiation
