diagnosis and failure prognosis of electrical machines and drives The authors begin with foundational background describing the physics of failure the motor and drive designs and components that affect failure and signals signal processing and analysis The book then moves on to describe the features of these signals and the methods commonly used to extract these features to diagnose the health of a motor or drive as well as the methods used to identify the state of health and differentiate between possible faults or their severity Fault Diagnosis Prognosis and Reliability for Electrical Machines and Drives discusses the tools used to recognize trends towards failure and the estimation of remaining useful life It addresses the relationships between fault diagnosis failure prognosis and fault mitigation The book also provides A thorough introduction to the modes of failure how early failure precursors manifest themselves in signals and how features extracted from these signals are processed A comprehensive exploration of the fault diagnosis the results of characterization and how they used to predict the time of failure and the confidence interval associated with it A focus on medium sized drives including induction permanent magnet AC reluctance and new machine and drive types Perfect for researchers and students who wish to study or practice in the rea of electrical machines and drives Fault Diagnosis Prognosis and Reliability for Electrical Machines and Drives is also an indispensable resource for researchers with a background in signal processing or statistics   Machine Learning Andreas Lindholm,Niklas Wahlström,Fredrik Lindsten,Thomas B. Schön,2022-03-31 This book introduces machine learning for readers with some background in basic linear algebra statistics probability and programming In a coherent statistical framework it covers a selection of supervised machine learning methods from the most fundamental k NN decision trees linear and logistic regression to more advanced methods deep neural networks support vector machines Gaussian processes random forests and boosting plus commonly used unsupervised methods generative modeling k means PCA autoencoders and generative adversarial networks Careful explanations and pseudo code are presented for all methods The authors maintain a focus on the fundamentals by drawing connections between methods and discussing general concepts such as loss functions maximum likelihood the bias variance decomposition ensemble averaging kernels and the Bayesian approach along with generally useful tools such as regularization cross validation evaluation metrics and optimization methods The final chapters offer practical advice for solving real world supervised machine learning problems and on ethical aspects of modern machine learning   Mathematics for Machine Learning Marc Peter Deisenroth,A. Aldo Faisal,Cheng Soon Ong,2020-04-23 The fundamental mathematical tools needed to understand machine learning include linear algebra analytic geometry matrix decompositions vector calculus optimization probability and statistics These topics are traditionally taught in disparate courses making it hard for data science or computer science students or professionals to efficiently learn the mathematics This self contained textbook bridges the gap between mathematical and machine learning texts introducing the mathematical concepts with a minimum of prerequisites It uses these concepts to derive four central machine learning methods linear regression principal component analysis Gaussian

mixture models and support vector machines For students and others with a mathematical background these derivations provide a starting point to machine learning texts For those learning the mathematics for the first time the methods help build intuition and practical experience with applying mathematical concepts Every chapter includes worked examples and exercises to test understanding Programming tutorials are offered on the book s web site   **The Humachine** Nada R. Sanders,John D. Wood,2019-09-09 There is a lot of hype hand waving and ink being spilled about artificial intelligence AI in business The amount of coverage of this topic in the trade press and on shareholder calls is evidence of a large change currently underway It is awesome and terrifying You might think of AI as a major environmental factor that is creating an evolutionary pressure that will force enterprise to evolve or perish For those companies that do survive the silicon wave sweeping through the global economy the issue becomes how to keep their humanity amidst the tumult What started as an inquiry into how executives can adopt AI to harness the best of human and machine capabilities turned into a much more profound rumination on the future of humanity and enterprise This is a wake up call for business leaders across all sectors of the economy Not only should you implement AI regardless of your industry but once you do you should fight to stay true to your purpose your ethical convictions indeed your humanity even as our organizations continue to evolve While not holding any punches about the dangers posed by overpowered AI this book uniquely surveys where technology is limited and gives reason for cautious optimism about the true opportunities that lie amidst all the disruptive change currently underway As such it is distinctively more optimistic than many of the competing titles on Big Technology This compelling book weaves together business strategy and philosophy of mind behavioral psychology and the limits of technology leadership and law The authors set out to identify where humans and machines can best complement one another to create an enterprise greater than the sum total of its parts the Humachine Combining the global business and forecasting acumen of Professor Nada R Sanders PhD with the legal and philosophical insight of John D Wood Esq the authors combine their strengths to bring us this profound yet accessible book This is a must read for anyone interested in AI and the future of human enterprise

Mathematical Foundations for Deep Learning Mehdi Ghayoumi,2025-08-05 Mathematical Foundations for Deep Learning bridges the gap between theoretical mathematics and practical applications in artificial intelligence AI This guide delves into the fundamental mathematical concepts that power modern deep learning equipping readers with the tools and knowledge needed to excel in the rapidly evolving field of artificial intelligence Designed for learners at all levels from beginners to experts the book makes mathematical ideas accessible through clear explanations real world examples and targeted exercises Readers will master core concepts in linear algebra calculus and optimization techniques understand the mechanics of deep learning models and apply theory to practice using frameworks like TensorFlow and PyTorch By integrating theory with practical application Mathematical Foundations for Deep Learning prepares you to navigate the complexities of AI confidently Whether you re aiming to develop practical skills for AI projects advance to emerging trends in

deep learning or lay a strong foundation for future studies this book serves as an indispensable resource for achieving proficiency in the field Embark on an enlightening journey that fosters critical thinking and continuous learning Invest in your future with a solid mathematical base reinforced by case studies and applications that bring theory to life and gain insights into the future of deep learning   Artificial Communication Elena Esposito,2022-05-24 A proposal that we think about digital technologies such as machine learning not in terms of artificial intelligence but as artificial communication Algorithms that work with deep learning and big data are getting so much better at doing so many things that it makes us uncomfortable How can a device know what our favorite songs are or what we should write in an email Have machines become too smart In Artificial Communication Elena Esposito argues that drawing this sort of analogy between algorithms and human intelligence is misleading If machines contribute to social intelligence it will not be because they have learned how to think like us but because we have learned how to communicate with them Esposito proposes that we think of smart machines not in terms of artificial intelligence but in terms of artificial communication To do this we need a concept of communication that can take into account the possibility that a communication partner may be not a human being but an algorithm which is not random and is completely controlled although not by the processes of the human mind Esposito investigates this by examining the use of algorithms in different areas of social life She explores the proliferation of lists and lists of lists online explaining that the web works on the basis of lists to produce further lists the use of visualization digital profiling and algorithmic individualization which personalize a mass medium with playlists and recommendations and the implications of the right to be forgotten Finally she considers how photographs today seem to be used to escape the present rather than to preserve a memory   Fundamentals of Machine Learning for Predictive Data Analytics, second edition John D. Kelleher,Brian Mac Namee,Aoife D'Arcy,2020-10-20 The second edition of a comprehensive introduction to machine learning approaches used in predictive data analytics covering both theory and practice Machine learning is often used to build predictive models by extracting patterns from large datasets These models are used in predictive data analytics applications including price prediction risk assessment predicting customer behavior and document classification This introductory textbook offers a detailed and focused treatment of the most important machine learning approaches used in predictive data analytics covering both theoretical concepts and practical applications Technical and mathematical material is augmented with explanatory worked examples and case studies illustrate the application of these models in the broader business context This second edition covers recent developments in machine learning especially in a new chapter on deep learning and two new chapters that go beyond predictive analytics to cover unsupervised learning and reinforcement learning The book is accessible offering nontechnical explanations of the ideas underpinning each approach before introducing mathematical models and algorithms It is focused and deep providing students with detailed knowledge on core concepts giving them a solid basis for exploring the field on their own Both early chapters and later case studies illustrate

how the process of learning predictive models fits into the broader business context The two case studies describe specific data analytics projects through each phase of development from formulating the business problem to implementation of the analytics solution The book can be used as a textbook at the introductory level or as a reference for professionals   The Oxford Handbook of International Security Alexandra Gheciu,William Curti Wohlforth,2018 This Oxford Handbook is the definitive volume on the state of international security and the academic field of security studies It provides a tour of the most innovative and exciting news areas of research as well as major developments in established lines of inquiry It presents a comprehensive portrait of an exciting field with a distinctively forward looking theme focusing on the question what does it mean to think about the future of international security The key assumption underpinning this volume is that all scholarly claims about international security both normative and positive have implications for the future By examining international security to extract implications for the future the volume provides clarity about the real meaning and practical implications for those involved in this field Yet contributions to this volume are not exclusively forecasts or prognostications and the volume reflects the fact that within the field of security studies there are diverse views on how to think about the future Readers will find in this volume some of the most influential mainstream positivist voices in the field of international security as well as some of the best known scholars representing various branches of critical thinking about security The topics covered in the Handbook range from conventional international security themes such as arms control alliances and Great Power politics to new security issues such as global health the roles of non state actors cyber security and the power of visual representations in international security The Oxford Handbooks of International Relations is a twelve volume set of reference books offering authoritative and innovative engagements with the principal sub fields of International Relations The series as a whole is under the General Editorship of Christian Reus Smith of the University of Queensland and Duncan Snidal of the University of Oxford with each volume edited by a distinguished pair of specialists in their respective fields The series both surveys the broad terrain of International Relations scholarship and reshapes it pushing each sub field in challenging new directions Following the example of the original Reus Smit and Snidal The Oxford Handbook of International Relations each volume is organized around a strong central thematic by a pair of scholars drawn from alternative perspectives reading its sub field in an entirely new way and pushing scholarship in challenging new directions   **The Stability of Belief** Hannes Leitgeb,2017 In everyday life we normally express our beliefs in all or nothing terms I believe it is going to rain I don t believe that my lottery ticket will win In other cases if possible we resort to numerical probabilities my degree of belief that it is going to rain is 80% the probability that I assign to my ticket winning is one in a million It is an open philosophical question how all or nothing belief and numerical belief relate to each other and how we ought to reason with them simultaneously The Stability of Belief develops a theory of rational belief that aims to answer this question by building new bridges between logic and probability theory traditional and mathematical epistemology and theoretical and practical rationality Hannes Leitgeb

develops a joint normative theory of all or nothing belief and numerical degrees of belief While rational all or nothing belief is studied in traditional epistemology and is usually assumed to obey logical norms rational degrees of belief constitute the subject matter of Bayesian epistemology and are normally taken to conform to probabilistic norms One of the central open questions in formal epistemology is what beliefs and degrees of belief have to be like in order for them to cohere with each other The answer defended in this book is a stability account of belief a rational agent believes a proposition just in case the agent assigns a stably high degree of belief to it Leitgeb determines this theory s consequences for and applications to learning suppositional reasoning decision making assertion acceptance conditionals and chance The volume builds new bridges between logic and probability theory traditional and formal epistemology theoretical and practical rationality and synchronic and diachronic norms for reasoning *Comunicazione artificiale* Elena Esposito,2022-10-21T00:00:00+02:00 Gli algoritmi che lavorano con il deep learning e i big data stanno diventando cos bravi a fare cos tante cose da metterci a disagio Come pu un dispositivo sapere quali sono le nostre canzoni preferite o che cosa dovremmo scrivere in un email Le macchine sono diventate troppo intelligenti Secondo Elena Esposito il punto un altro questo tipo di analogia tra algoritmi e intelligenza umana infatti fuorviante Se le macchine contribuiranno all intelligenza sociale non sar perch hanno imparato a pensare come noi ma perch noi abbiamo imparato a comunicare con loro Da qui dunque la proposta di pensare alle tecnologie digitali e alle macchine intelligenti non in termini di intelligenza artificiale ma di comunicazione artificiale Per far questo abbiamo bisogno di un concetto di comunicazione che tenga conto della possibilit che il nostro partner di comunicazione non sia un essere umano ma un algoritmo non casuale ma completamente controllato anche se non dai processi della mente umana Indagare su questo aspetto significa esaminare l uso degli algoritmi in diversi ambiti della vita sociale dalla proliferazione di liste e liste di liste online all uso della visualizzazione dalla profilazione digitale e individualizzazione algoritmica che attraverso playlist e raccomandazioni fanno del web un mezzo di comunicazione che non pi di massa alle implicazioni del diritto all oblio per approdare infine alle fotografie utilizzate oggi pi per sfuggire al presente che per conservare una memoria per il futuro
