Sayable Space. Narrative Practices in Architecture Giovanni Corbellini, 2021-11-18 When a work reaches its maximum intensity wrote Le Corbusier a phenomenon of ineffable space occurs The ultimate quality of architecture would reside therefore in the resistance to its description However to tell us this and much more the Swiss master has published more than seventy books and his so compelling formula in supporting the ineffable also shows how words are able to grasp it This brief essay investigates the multiple intersections between discourse and design the way buildings try to talk with their own specific means how architects are trying to remain relevant without building the paradoxes of architecture description after its completion the modes of communication during the project processes the capacity of narrative to act before the project operations start and infiltrate the collective perception making possible innovative approaches **Reinventing the**

Museum Gail Anderson, 2023-05-04 *Reinventing the Museum* Relevance Inclusion and Global Responsibilities is the third edition following the 2004 and 2012 versions of the *Reinventing* series More than a decade since the prior volume was published this edition features all new content written since 2017 relevant to this pivotal time for museums operating in a complex world This anthology features leading thinkers from across the globe who expertly discuss the realities facing museums the urgency to take action and museums as essential contributors to a more equitable and socially responsible world The introduction highlights the issues of our times and frames the structure of the book and intentional order of the contents A dramatically revised *Reinventing the Museum* Tool serves as a springboard for discussions within museum staff and trustees among students and faculty and with emerging to seasoned museum professionals The curated approach of the book unfolds with a sequence of thinking that frames the subsequent sections and chapters The range of topics in this volume cover global realities shifts in institutional mindset the urgency to achieve inclusion and equity in museums and fresh perspectives of practical approaches to actualize the reinvented museum *Design and the Built Environment of the Arctic*

Leena Cho, Matthew Jull, 2023-12-20 *Design and the Built Environment of the Arctic* is a concise introductory guide to the design and planning of the built environments in the Arctic region. As the global forces of change are becoming more pronounced in the Arctic, the future trajectories for living environments, city making processes, and their adaptive capacities need to be addressed directly. This book presents 11 new and original contributions from both leading and emerging scholars and practitioners positioning the Arctic as a dynamic, diverse, and lived place at the nexus of unprecedented socioenvironmental transformations. The volume offers key concepts for understanding and spatializing Arctic cities and landscapes, similarities and differences in the development of design and planning approaches responsive to specific climatic and cultural conditions, and historical and geographic case studies that provide unique perspectives for the management of the built environment from the scales of a building and infrastructure to cities and territories. Altogether, the contributions expand regional Arctic design scholarship to understand how the variability of the Arctic context influences the designed urban architecture and landscape systems and offer numerous lessons for design and other forms of spatial practice both within and beyond the Arctic. This is a unique resource for researchers, creative practitioners, policymakers, and community decision makers, as well as for advanced undergraduate and graduate students. Sustainable Urbanization Mustafa Ergen, 2016-09-28 The rapid urbanization that began with industrialization has begun to cause many problems. New approaches are emerging today to minimize these problems and make urban areas more livable. These problems include insufficient social facilities in urban areas for increasing populations due to migration and unbalanced use of green areas, water, and energy resources due to urbanization. Careless consumption and the pollution of natural resources will cause people many more problems in the future than they do today in urban development. Many professional disciplines have noticed this unbalanced development in urban areas. Urban areas have larger populations than rural areas today. Urban areas are developed neglectfully. Sustainability is needed as a criterion for urban areas to develop in a more livable and healthy fashion. Sustainable urban development approaches are seen in many fields ranging from land use to the use of natural resources in urban areas. **The Routledge Companion to Contemporary Art, Visual Culture, and Climate Change** T. J. Demos, Emily Eliza Scott, Subhankar Banerjee, 2021-02-25 International in scope, this volume brings together leading and emerging voices working at the intersection of contemporary art, visual culture, activism, and climate change and addresses key questions such as why and how do art and visual culture and their ethics and values matter with regard to a world increasingly shaped by climate breakdown. Foregrounding a decolonial and climate justice based approach, this book joins efforts within the environmental humanities in seeking to widen considerations of climate change as it intersects with social, political, and cultural realms. It simultaneously expands the nascent branches of ecocritical art history and visual culture and builds toward the advancement of a robust and critical interdisciplinarity appropriate to the complex entanglements of climate change. This book will be of special interest to scholars and practitioners of contemporary art and visual culture.
