Ib Geography Option D Hazards Disasters Risk Assessment Response:

IB Geography Garrett Nagle, 2013 *Learning to Teach Geography in the Secondary School* Mary Biddulph, David Lambert, David Balderstone, 2015-05-20 *Learning to Teach Geography in the Secondary School* has become the widely recommended textbook for student and new teachers of geography. It helps you acquire a deeper understanding of the role, purpose and potential of geography within the secondary curriculum and provides the practical skills needed to design, teach and evaluate stimulating and challenging lessons. It is grounded in the notion of social justice and the idea that all students are entitled to a high quality geography education. The very practical dimension provides you with support structures through which you can begin to develop your own philosophy of teaching and debate key questions about the nature and purpose of the subject in school. Fully revised and updated in light of extensive changes to the curriculum as well as to initial teacher education, the new edition considers the current debates around what we mean by geographical knowledge and what is involved in studying at Masters level. Key chapters explore the fundamentals of teaching and learning geography: Why we teach and what to teach; Understanding and planning the curriculum; Effective pedagogy; Assessment; Developing and using resources; Fieldwork and outdoor learning; Values in school geography; Professional development. Intended as a core textbook and written with university and school-based initial teacher education in mind, *Learning to Teach Geography in the Secondary School* is essential reading for all those who aspire to become effective, reflective teachers. Praise for previous editions of *Learning to Teach Geography in the Secondary School*: This is a practical and visionary book as well as being superbly optimistic. It has as much to offer the experienced teacher as the novice and could be used to reinvigorate geography departments everywhere. Practical activities and ideas are set within a carefully worked out, authoritative conceptual framework. *The Times Educational Supplement*. This is a modern, powerful, relevant and comprehensive work, a standard reference for many beginning teachers on geography initial teacher training courses. *Educational Review* **Water**

Security Bruce Lankford, Karen Bakker, Mark Zeitoun, Declan Conway, 2013-10-15 The purpose of this book is to present an overview of the latest research, policy, practitioner, academic and international thinking on water security, an issue that like water governance a few years ago has developed much policy awareness and momentum with a wide range of stakeholders. As a concept it is open to multiple interpretations and the authors here set out the various approaches to the topic from different perspectives. Key themes addressed include: Water security as a foreign policy issue; The interconnected variables of water, food and human security; Dimensions other than military and international relations concerns around water security; Water security theory and methods; Tools and audits. The book is loosely based on a Masters level degree plus a short professional course on water security both given at the University of East Anglia, delivered by international authorities on their subjects. It should serve as an introductory textbook as well as be of value to professionals, NGOs and policy makers.
